6. MAINTENANCE AND CLEANING

Regular cleaning ensures optimal performance and extends the life of your appliance.

1. **Cool Down:** Always ensure the appliance is unplugged and completely cool before cleaning.
2. **Empty Water Tank:** Remove the water tank and empty any remaining water. Rinse the tank with clean water.
3. **Clean Exterior:** Wipe the exterior of the appliance with a soft, damp cloth. Do not use abrasive cleaners or solvents.
4. **Clean Steam Head:** Use a damp cloth to wipe the steam head. If the brush attachment is dirty, remove it and rinse

under water, then allow it to dry completely before reattaching.

5. **Descaling:** Over time, mineral deposits may build up in the water tank and internal components, especially if tap water is used. To descale, fill the water tank with a mixture of 50% white vinegar and 50% water. Operate the steamer until half of the solution is used, then unplug and let it sit for 30 minutes. Finish steaming the remaining solution, then rinse the tank and steam with clean water several times. Perform descaling every few months, or more frequently if you notice reduced steam output.
6. **Storage:** Store the appliance in a cool, dry place, away from direct sunlight.
