5. Installation

Follow these steps for proper installation of the wheel center caps and lug nut covers:

1. **Prepare the Wheels:** Ensure your vehicle's wheels are clean and free of dirt or debris, especially around the hub and lug nuts.
2. **Install Lug Nut Covers:** Align each black lug nut cover with an exposed lug nut. Press firmly until the cover snaps securely into place. Repeat for all 20 lug nuts.
3. **Install Center Caps:** Align each wheel hub center cap with the center opening of the wheel. Apply even pressure to push the cap into the opening until it sits flush and is securely fastened. The clips on the back of the cap will hold it in place.

6. Maintenance

To maintain the appearance and integrity of your wheel accessories:

- Clean the caps and covers regularly with mild soap and water. Avoid harsh chemicals or abrasive cleaners.

- The lug nut cover puller tool can be used for safe removal of the lug nut covers when necessary, such as during tire rotation or wheel maintenance.

7. Troubleshooting

- **Difficulty Installing Lug Nut Covers:** Ensure the lug nut is clean and free of rust or debris. Apply firm, even pressure. Do not force the cover if it does not align properly.

- **Loose Fit:** If a lug nut cover or center cap feels loose after installation, remove it and re-install, ensuring proper alignment and sufficient pressure. If the issue persists, inspect the clips or internal structure for damage.
- **Difficulty Removing Lug Nut Covers:** Use the provided lug nut cover puller tool. Insert the tool's prongs under the edge of the cover and gently pry it off. Avoid using sharp objects that could scratch the wheel or cover.
