

M5Stack K010

M5Stack Core2 IoT Development Kit User Manual

Model: K010

1. INTRODUCTION

The M5Stack Core2 is a versatile IoT development kit designed for rapid prototyping and deployment of various applications. It features an ESP32-D0WDQ6-V3 microcontroller, a 2-inch TFT LCD touch screen, and integrated Wi-Fi and Bluetooth connectivity. This manual provides essential information for setting up, operating, and maintaining your Core2 device.

Figure 1.1: M5Stack Core2 IoT Development Kit, showcasing its compact design and display.

2. WHAT'S IN THE BOX

Verify that all items listed below are included in your package:

- 1 x M5Stack Core2 Unit
- 1 x USB Type-C Cable (20cm)
- 1 x Hex Wrench

Figure 2.1: Contents of the M5Stack Core2 package, including the Core2 unit, USB-C cable, and hex wrench.

Figure 2.2: Visual representation of the shipping list for the M5Stack Core2.

3. PRODUCT OVERVIEW

The M5Stack Core2 is built around the ESP32-D0WDQ6-V3 chip, offering robust performance for various applications. Key features include:

- **Powerful Performance:** Equipped with an ESP32-D0WDQ6-V3 microcontroller for high computing performance.
- **Touch Screen Display:** Features a 2-inch TFT LCD touch screen (320x240 resolution) for intuitive user interaction.
- **Wireless Connectivity:** Integrated Wi-Fi and Bluetooth capabilities for seamless communication.

- **Expandable Functionality:** Multiple expansion ports (GPIO, I2C, SPI, UART) for connecting additional modules and sensors.
- **Built-in Speaker:** For audio output.
- **Vibration Motor:** Provides haptic feedback.
- **Microphone:** For audio input.
- **SD Card Slot:** For expandable storage.

4. SPECIFICATIONS

The following table details the technical specifications of the M5Stack Core2:

Specification	Parameter
SoC	ESP32-D0WDQ6-V3, 240MHz dual core, 600 DMIPS, 520KB SRAM, Wi-Fi
Flash	16MB
PSRAM	8MB
Input Voltage	5V @ 500mA
Host Interface	Type-C x 1, GROVE(I2C+I/O+UART) x 1
LED	Green power indicator light
Buttons	Power button, RST button, screen virtual buttons x 3
Vibration Alert	Vibration motor

Specification	Parameter
Item Weight	2.82 ounces (approx. 80 grams)
Package Dimensions	3.19 x 2.28 x 0.87 inches
Batteries	1 Lithium Ion battery (included)

Figure 4.1: M5Stack Core2 weight measurement.

Figure 4.2: M5Stack Core2 dimensions.

5. SETUP

To begin using your M5Stack Core2, follow these initial setup steps:

1. **Charging:** Connect the M5Stack Core2 to a 5V USB power source using the provided USB Type-C cable. The device will begin charging.
2. **Power On:** Press and hold the power button (usually located on the side) for approximately 6 seconds to turn on the device.
3. **Software Environment:** The Core2 supports various development environments, including UIFlow, Arduino, and MicroPython. Choose your preferred environment and set up the necessary drivers and IDE on your computer.
4. **First Program:** Refer to the official M5Stack documentation for guides on uploading your first program or firmware to the Core2.

6. OPERATING INSTRUCTIONS

The M5Stack Core2 is designed for flexible operation depending on your application. Here are general guidelines:

- **Touch Screen Interaction:** Navigate menus and interact with applications using the 2-inch capacitive touch screen.
- **Virtual Buttons:** The three virtual buttons below the screen can be programmed for various functions within your applications.
- **Physical Buttons:** The physical RST (Reset) button can be used to restart the device. The power button can be used for power cycling.
- **External Modules:** Connect compatible M5Stack modules and sensors to the GROVE port to expand functionality. Ensure proper connection and power supply for external modules.
- **SD Card Usage:** Insert a microSD card into the designated slot for additional storage. Ensure the card is formatted correctly (e.g., FAT32).

7. MAINTENANCE

Proper maintenance ensures the longevity and optimal performance of your M5Stack Core2:

- **Cleaning:** Use a soft, dry cloth to clean the device. Avoid using liquid cleaners or abrasive materials.
- **Storage:** Store the device in a cool, dry place away from direct sunlight and extreme temperatures.
- **Battery Care:** Avoid fully discharging the battery frequently. If storing for extended periods, charge the battery to about 50-70% to preserve its lifespan.
- **Firmware Updates:** Regularly check the official M5Stack website for firmware updates to ensure your device has the latest features and bug fixes.
- **Physical Protection:** While durable, avoid dropping the device or exposing it to excessive force or moisture.

8. TROUBLESHOOTING

This section addresses common issues you might encounter with your M5Stack Core2.

Q1: What is the maximum supported capacity of the SD card, and why is there no response when the SD card is inserted?

Theoretically, devices based on ESP32 support up to 16GB. We recommend using a SD card model SDSQUNC-016G-ZN6MA. Ensure the SD card is properly inserted and formatted.

Q2: Using the battery in either of the battery ports on the USB unit or the Core2 forces the unit to stay powered on continuously. Any attempt to shut down using the side button causes the device to restart after.

We have found that the reason is that the filter capacitor capacity of the USB 1.2 module is too large. If you still need to use batteries to power the Core2 + USB 1.2 solution, to avoid frequent restarts, the following two solutions can be adopted:

- Remove the filter capacitor.
- Replace it with a smaller capacity filter capacitor (10uF is recommended).

Q3: How to extend the Core2 with an extension module?

You must remove the original bottom and battery of the Core2, then you can stack another module extension.

Figure 8.1: Common questions and solutions for the M5Stack Core2.

9. SCOPE OF APPLICATION

The M5Stack Core2 is suitable for a wide range of applications, including but not limited to:

- **Smart Home Devices:** Control and monitor home automation systems.
- **STEM Education:** An excellent tool for learning about IoT, programming, and electronics.
- **IoT Controller:** Serve as a central controller for various Internet of Things projects.
- **DIY Projects:** Ideal for custom electronic projects and rapid prototyping.

Core2 v1.1

SKU:K010-V11

Description

Core2 V1.1 is an iterative version of Core, with upgraded power IC and a continuation of the classic design of Core2. It is a powerful and user-friendly development board. Core2 V1.1 is equipped with ESP32-D0WDQ6-V3, featuring two independent Xtensa® 32-bit LX6 processors with a clock frequency of up to 240MHz. It supports WiFi functionality and has onboard 16MB Flash and 512KB PSRAM, and supports program downloading via the TYPE-C interface. Its strong configuration can meet the requirements of complex applications.

Core2 V1.1 is equipped with a 2.0-inch integrated capacitive touch screen. The three dots on the front of the screen are part of the touch screen. Users can set the hot zone mapping as three virtual buttons through programming, enabling diverse human-machine interaction experiences. Additionally, Core2 V1.1 has a built-in vibration motor for haptic feedback and vibration alert functionality.

Core2 V1.1 has an integrated RTC module and a dedicated battery for RTC power supply, providing accurate timing functionality. Furthermore, the A372101 power management chip effectively controls the power consumption of the device. Core2 V1.1 also has a built-in blue power indicator light, which can be used to implement specific functions or status indications according to the user's application needs. Core2 V1.1 is also equipped with a MicroSD card slot, speaker, and a high-quality I2S digital audio interface power

Description

M5Core2 is the second generation core device in the M5Stack development kit series, which further enhances the functions of the original generation of cores.

The MCU is an ESP32 model D0WDQ6-V3 and has dual core Xtensa® 32-bit 240Mhz LX6 processors that can be controlled separately. WIFI and Bluetooth are supported as standard and it includes an on-board 16MB Flash and 8MB PSRAM, USB TYPE-C interface for charging, downloading of programs and serial communication, a 2.0-inch integrated capacitive touch screen, and a built-in vibration motor.

M5Core2 also features a built-in RTC module which can provide accurate timing. The power supply is managed by an AP1102 power management chip, which can provide accurate timing. The battery capacity has been upgraded to 100mAh, which can provide the device for a longer time than the previous version.

The M5Core2 includes the TF card (optional) and an expansion port. In order to ensure higher quality and reliability, the RGB light module has been upgraded to a higher quality module. There are expansion ports and an expansion port for the device.

The M5Core2 includes the TF card (optional) and an expansion port. In order to ensure higher quality and reliability, the RGB light module has been upgraded to a higher quality module. There are expansion ports and an expansion port for the device.

Power supply

- Power on: click the power button.
- Power off: press the power button for 5s.

Reset: click the RST button on the board.

Connect to the AP1102 power chip. Please install the "lib" module per the following method, as below.
