5. Operating Instructions

5.1 N-Key Rollover (NKRO)

The keyboard features N-Key Rollover, meaning it can register every key press simultaneously, regardless of how many keys are pressed at once. This is particularly beneficial for fast typists and gamers, preventing "ghosting" or missed key inputs.

5.2 Programmable Keys and Macros

The Akko TKL keyboard allows for extensive customization of key functions. You can remap most keys to perform different actions or create complex macro sequences. Please note that the Esc and Win keys are typically reserved for controlling the Macro mode and cannot be remapped.

For detailed instructions on programming keys and setting up macros, please refer to the official Akko software or user guide available on the Akko website. This software provides a graphical interface for easy customization.

5.3 Operating System Switching

To switch between Windows and Mac operating system layouts:

- For Windows mode: Press and hold **Fn + Q**.
- For Mac mode: Press and hold **Fn + O**.

This ensures optimal key mapping and functionality for your chosen operating system.

5.4 LED Customization (Modding)

While the keyboard does not come with pre-installed LEDs, it features built-in LED slots. This allows users to install their own LEDs and customize light animations. This advanced modification requires technical knowledge and compatible LED components. Refer to community resources or Akko's official modding guides for detailed instructions if you plan to undertake this customization.

6. Maintenance

Proper maintenance ensures the longevity and optimal performance of your mechanical keyboard.

6.1 General Cleaning

- **Dust Removal:** Regularly use compressed air to blow away dust and debris from between the keycaps.
- **Surface Cleaning:** Wipe the keyboard surface and keycaps with a soft, slightly damp, lint-free cloth. Avoid using harsh chemicals or abrasive materials.
- **Deep Cleaning (Keycaps):** For a more thorough clean, use the included keycap puller to carefully remove the keycaps. You can then wash the keycaps with mild soap and water, ensuring they are completely dry before reattaching. Clean the exposed switches and plate with compressed air or a soft brush.

6.2 Cable Care

Avoid sharp bends or kinks in the USB cable. Store the cable neatly when not in use to prevent damage.

7. Troubleshooting

If you encounter issues with your Akko TKL keyboard, try the following troubleshooting steps:

- **Keyboard Not Responding:**
  - Ensure the USB cable is securely connected to both the keyboard and the computer.
  - Try connecting the keyboard to a different USB port on your computer.
  - Test the keyboard on another computer to determine if the issue is with the keyboard or your system.
- **Specific Keys Not Working:**
  - Remove the keycap of the problematic key using the keycap puller.
  - Inspect the switch for any visible debris or damage. Use compressed air to clear any obstructions.
  - If the switch is removable, try reseating it or replacing it with a spare if available.
- **Incorrect Key Output (Windows/Mac):**
  - Ensure you are in the correct operating system mode. Press **Fn + Q** for Windows or **Fn + O** for Mac.
- **Software/Driver Issues:**
