# SAKAWA 7.5 HP Tiller Cultivator Model 8611G75 User Manual

Model: 8611G75 | Brand: SAKAWA

## Introduction

This manual provides essential information for the safe and efficient operation, assembly, and maintenance of your SAKAWA 7.5 HP Tiller Cultivator Model 8611G75. This high-quality tiller cultivator is designed for preparing small to medium-sized orchards and gardens, featuring a robust engine, a versatile gearbox, and adjustable working parameters. Please read this manual thoroughly before initial use to ensure proper handling and to maximize the lifespan of your equipment.

## Safety Information

**WARNING:** Failure to follow these safety instructions can result in serious injury or death.

- Always wear appropriate personal protective equipment (PPE), including safety glasses, gloves, and sturdy footwear, when operating the tiller.
- Be extremely cautious of moving parts, especially the rotating blades. Keep hands, feet, and clothing away from all moving components.
- Be aware of debris that may be thrown by the blades during operation. Ensure no bystanders or pets are in the working area.
- Read and fully understand the entire user manual before attempting to operate, assemble, or maintain the tiller cultivator.
- Never operate the machine under the influence of alcohol, drugs, or medication that may impair judgment or coordination.
- Ensure the work area is clear of obstacles, rocks, and other foreign objects that could be struck by the blades.

- Turn off the engine and disconnect the spark plug wire before performing any maintenance, adjustments, or clearing blockages.

## Setup and Assembly

The SAKAWA 7.5 HP Tiller Cultivator requires some assembly before first use. While designed for relatively easy setup, careful attention to detail is crucial.

1. **Unpacking:** Carefully remove all components from the packaging. Verify that all parts listed in the packing list are present.
2. **Handlebar Assembly:** Attach the handlebar to the main unit. The handlebar is adjustable for height and side positions to ensure comfortable operation. Secure all bolts and nuts firmly.
3. **Front Wheel Installation:** Install the front transport wheels. These wheels are designed for easy attachment and removal without spring pins, facilitating transport of the machine.

4. **Tine Assembly:** The tiller comes with a set of removable blades (tines). Attach these to the main shaft. Ensure they are securely fastened. The working width can be adjusted by adding or removing sections of the blades.

6. **Adjustments:** Adjust the spur (depth bar) to the desired tilling depth. Adjust the handlebar to a comfortable height and angle for your posture.

## Operating Instructions

Follow these steps for safe and effective operation of your SAKAWA Tiller Cultivator.

1. **Pre-Operation Check:** Before each use, inspect the tiller for any loose parts, damaged blades, or fluid leaks. Ensure all safety guards are in place.
2. **Starting the Engine:**
    - Ensure the fuel valve is open and the engine switch is in the "ON" position.
    - If cold, apply choke as per engine manufacturer's instructions.
    - Pull the reversible starter cord firmly until the engine starts.

- Once started, gradually push the choke lever back to the "OFF" position.

3. **Engaging the Tines:** The tiller features a double belt clutch system. Engage the clutch lever carefully to start the rotation of the tines. The clutch lever includes a safety system for enhanced user protection.
4. **Gear Selection:** This model offers 2 forward speeds and 1 reverse speed. Select the appropriate gear based on soil conditions and desired working pace. Use lower speeds for tougher soil or deeper tilling.

5. **Tilling:** Guide the tiller steadily across the area to be cultivated. Allow the machine to do the work; do not force it. The adjustable spur helps control the tilling depth (17-35 cm). The removable blade set allows for an adjustable working width of 60 to 85 cm.
6. **Turning:** The adjustable handlebar and responsive controls make turning easier. For tight turns, slightly lift the front of the tiller.
7. **Stopping:** To stop the tines, release the clutch lever. To stop the engine, move the engine switch to the "OFF" position.

## Maintenance

Regular maintenance is crucial for the longevity and optimal performance of your SAKAWA Tiller Cultivator. Always ensure the engine is off and cool, and the spark plug wire is disconnected before performing any maintenance.

- **Engine Oil:** Check the engine oil level before each use. Change the oil according to the schedule in the engine

manual (typically after the first 5 hours, then every 25-50 hours of operation). Use recommended engine oil type.

- **Air Filter:** The engine is equipped with an oil bath air filter. Clean or replace the air filter element regularly, especially when operating in dusty conditions. Refer to the engine manual for specific instructions.
- **Spark Plug:** Inspect the spark plug periodically. Clean or replace it if it is fouled or worn. Ensure the gap is set correctly.
- **Tines/Blades:** Inspect the tines for wear or damage before and after each use. Replace worn or bent tines to maintain tilling efficiency. Ensure all tine bolts are tight.
- **Gearbox:** The gearbox is protected by a steel plate. Check for any signs of leaks or damage to the gearbox housing. Consult a service professional if issues are detected.
- **Belts:** Inspect the double drive belts for wear, cracks, or proper tension. Replace belts if they show signs of damage or excessive wear.
- **General Cleaning:** After each use, clean soil and debris from the tines, chassis, and engine cooling fins. This prevents buildup and ensures proper cooling.
- **Storage:** For long-term storage, drain the fuel tank or add a fuel stabilizer. Clean the machine thoroughly and store it in a dry, protected area.
