MAINTENANCE

Regular maintenance will help prolong the life and performance of your bed frame.

- **Cleaning:** Wipe the metal frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, as these can damage the finish.
- **Check Connections:** Periodically (e.g., every 3-6 months) inspect all bolts and connections to ensure they remain tight. Re-tighten if necessary to maintain stability and prevent squeaking.
- **Avoid Overloading:** Adhere to the maximum weight recommendation to prevent structural damage.

TROUBLESHOOTING

If you encounter any issues with your VECELO bed frame, refer to the following common solutions:

- **Squeaking Noise:**

- Ensure all bolts are securely tightened. Loose connections are a common cause of squeaking.
- Check if the mattress is properly seated and not rubbing against the frame in an unusual way.

- **Instability/Wobbling:**

- Verify that the bed frame is on a level surface. Adjust if necessary.
- Re-tighten all assembly bolts.
- Confirm that all support legs are making firm contact with the floor.

- **Mattress Sliding:**

- Ensure the mattress is correctly positioned within the frame's perimeter.
- If sliding persists, consider using a non-slip mattress pad between the mattress and the slats.

If these steps do not resolve the issue, please contact VECELO customer service for further assistance.
