- **Cleaning:** Always unplug the fan before cleaning. Use a soft, damp cloth to wipe down the exterior surfaces. Do not use abrasive cleaners or immerse the fan in water.

- **Dust Removal:** Regularly clean the air intake and outlet grilles to prevent dust buildup, which can affect airflow and efficiency. A vacuum cleaner with a brush attachment can be used for this purpose.
- **Storage:** If storing the fan for an extended period, ensure it is clean and dry. Store it in a cool, dry place, preferably in its original packaging, to protect it from dust and damage.

TROUBLESHOOTING

If you encounter issues with your Uthfy Tower Fan, please refer to the following common troubleshooting tips:

- **Fan does not turn on:** Ensure the power cord is securely plugged into a working electrical outlet. Check if the power button on the control panel or remote control has been pressed.
- **Weak airflow:** Verify that the air intake and outlet grilles are not obstructed by dust or other objects. Ensure the fan is set to a higher speed mode.
- **Remote control not working:** Check if the CR2 battery in the remote control needs replacement. Ensure there are no obstructions between the remote and the fan's sensor. The remote works best when pointed directly at the fan.
- **Unusual noise:** Ensure the fan is placed on a flat, stable surface. Check for any foreign objects that might have entered the fan grilles. If the noise persists, discontinue use and contact customer support.
