3. KEY FEATURES

This replacement main brush incorporates advanced design elements for superior cleaning:

- **Anti-tangle Design:** The innovative design significantly reduces hair tangling, ensuring the brush runs smoothly and extends its service life. This feature is particularly beneficial for households with pets, minimizing maintenance frequency.
- **Floating Rubber Main Brush:** An intelligent floating mechanism allows the brush to maintain close contact with hard floors for effective dirt capture. When transitioning to carpets, the brush intelligently lifts to improve agitation, ensuring a thorough and deep clean across various surfaces.
- **Durable All-Rubber Construction:** Constructed entirely from rubber, this brush offers enhanced durability and improved resistance to wear and tear, contributing to a longer lifespan.

Multi-surface Cleaning

Easily picks up pet hair, dust and finer dirt from floors or carpets.

4. SETUP AND INSTALLATION

Follow these steps to replace the main brush in your Roborock robot vacuum cleaner:

1. Turn off your robot vacuum cleaner and place it upside down on a clean, flat surface.
2. Locate the main brush cover, usually secured by two tabs or latches.
3. Press the tabs or unlatch the cover to open the main brush compartment.
4. Carefully remove the old main brush from its housing.
5. Insert the new Roborock Rubber Main Brush Replacement into the compartment, ensuring it clicks securely into place.
6. Close the main brush cover, making sure it is properly latched.

5. MAINTENANCE

Regular maintenance of your main brush is essential for optimal cleaning performance and to extend the lifespan of your robot vacuum. The easy installation and disassembly design simplifies this process.

- **Cleaning Frequency:** It is recommended to clean the main brush every 2 weeks. This helps prevent debris buildup and maintains effective suction power.
- **Replacement Frequency:** For best performance, replace the main brush every 6-12 months, depending on usage and household conditions (e.g., presence of pets). Timely replacement ensures your robot vacuum continues to operate at its peak efficiency.

6. TROUBLESHOOTING

If you experience issues with your robot vacuum's cleaning performance after replacing the main brush, consider the following:

- **Reduced Suction Power:** Ensure the main brush is free of tangled hair or debris. A clogged brush can significantly reduce cleaning effectiveness. Verify the brush is correctly installed and securely latched.
- **Unusual Noises:** Check if the main brush is properly seated and not obstructed by foreign objects. Remove the brush and inspect the compartment for any blockages.
- **Brush Not Rotating:** Confirm the brush is installed correctly and the brush cover is fully closed. If the issue persists, inspect the brush motor area for any visible obstructions or damage.

For persistent issues, refer to your robot vacuum's main user manual or contact Roborock customer support.
