

Vonets VAP11S

Vonets VAP11S Mini WiFi Bridge/Repeater/Router User Manual

Detailed instructions for setup, operation, and troubleshooting.

1. INTRODUCTION

The Vonets VAP11S is a versatile industrial-grade 2.4GHz WiFi device designed to function as a WiFi Bridge, Repeater, Router, or Wireless Access Point. It enables wired devices to connect to a WiFi network and extends existing wireless coverage. This manual provides essential information for the proper installation, configuration, and use of your VAP11S device.

2. PRODUCT OVERVIEW

2.1 Key Features

- Industrial Mini 2.4GHz WiFi Router/Bridge/Repeater/Wireless Access Point/WiFi to Ethernet RJ45/WiFi Adapter.
- Supports connecting wired devices to WiFi (e.g., security systems, DVRs, IP cameras, PLCs).
- WiFi Rate: 300Mbps, supports 802.11B/G/N wireless protocol.
- Equipped with 2 external antennas for enhanced data transmission distance.
- Includes 1 RJ45 network port, supporting up to 2 wired and 20 wireless devices simultaneously.
- Multiple power supply options: DC5V-24V (typical 5V/2A), with two-stage automatic overvoltage protection (up to 27V).
- USB or DC powered modes available.

2.2 Device Components

The Vonets VAP11S device includes the main unit, two external antennas, a USB power cable, and an Ethernet cable. It also comes with a fixing kit and an industrial DC connector for various installation needs.

Image: The Vonets VAP11S device, showing its compact design with two external antennas, a USB power cable, and an Ethernet cable.

VAP11S is suitable for various applications

VAP11S is applicable to application scenarios

Robot

Electronic Scale

Printer

Doll Machine

PLC

Set-top box

Robot Arm

Cashier

Attendance machine

Image: A detailed diagram highlighting the various ports and components of the VAP11S, including the LAN port, LAN/WAN port, USB power input, DC power input, and the reset button.

3. SETUP

3.1 Power Supply

The VAP11S supports a wide voltage input of DC 5V-24V. It can be powered via the included USB cable (typical 5V/2A) or through the DC power input. Ensure the power source meets the specified voltage range to prevent damage. The device features two-stage automatic overvoltage protection up to 27V.

3.2 Physical Connections

1. **Connect Antennas:** Screw the two external 2.4GHz antennas onto the connectors on the VAP11S device.
2. **Power On:** Connect the USB power cable to a 5V USB power adapter or use the DC power cable with a compatible power source (5V-24V).

3. **Ethernet Connection:** Depending on the desired operating mode, connect an Ethernet cable to the LAN or LAN/WAN port.

3.3 Initial Configuration

To configure the VAP11S, connect a computer directly to the device's LAN port via an Ethernet cable. Access the device's web-based management interface by entering its default IP address (refer to the product packaging or manufacturer's website for the specific IP address) into a web browser. Follow the on-screen instructions to set up the desired operating mode and network parameters. It is recommended to consult the official configuration video or detailed manual provided by Vonets for a successful one-time setup.

4. OPERATING MODES

The Vonets VAP11S supports multiple operating modes to suit various networking requirements.

4.1 WiFi Bridge Mode

In Bridge mode, the VAP11S converts a WiFi signal into a wired signal, allowing wired devices (e.g., desktop computers, DVRs, PLCs) to connect to a wireless network. It effectively replaces the need for a physical network cable run to the main router.

Image: Illustration of the VAP11S acting as a WiFi bridge, providing network connectivity to a wired computer from a wireless router.

4.2 WiFi Repeater Mode

As a Repeater, the VAP11S extends the coverage of an existing WiFi network. It receives the wireless signal from your main router and re-transmits it, eliminating dead zones and improving signal strength in areas with weak coverage.

Image: Diagram showing the VAP11S extending the wireless signal from a main router to cover a larger area within a building.

4.3 WiFi Router Mode

In Router mode, the VAP11S can create a new wireless network from a wired internet connection. This is useful for providing wireless access to multiple devices in a new location or segmenting a network.

Image: Illustration of the VAP11S functioning as a WiFi router, connecting to the internet via a modem and providing wireless access to various devices.

4.4 Access Point (AP) Mode

AP mode allows the VAP11S to convert a wired network connection into a wireless access point. This is suitable for scenarios where a wired network is available, and wireless connectivity is required for devices like laptops and smartphones without dialing.

Image: A diagram illustrating the VAP11S in AP mode, providing wireless access to devices from a wired internet source.

4.5 Point-to-Point Transmission

The VAP11S can be used for long-distance point-to-point wireless transmission, connecting two remote locations wirelessly. With two VAP11S devices, a barrier-free transmission distance of up to 300 meters can be achieved (less than 100 meters for video transmission).

Image: A visual representation of two VAP11S devices establishing a point-to-point wireless link, connecting a local network to remote devices like surveillance cameras.

5. TYPICAL APPLICATIONS

The industrial design and versatile functionality of the VAP11S make it suitable for a wide range of applications, particularly in industrial and commercial environments.

- **Industrial Automation:** Connecting PLCs (Programmable Logic Controllers) and other industrial control devices to a wireless network.
- **Surveillance Systems:** Providing wireless connectivity for DVRs and IP cameras.
- **Retail & Logistics:** Integrating electronic scales, cashiers, and attendance machines into a network.
- **Robotics:** Enabling wireless communication for robots and robot arms.
- **Medical Devices:** Connecting medical equipment to hospital networks.
- **Entertainment:** Connecting gaming consoles (e.g., PS3), set-top boxes, and network printers.

Image: A collage depicting various application scenarios for the VAP11S, such as connecting robots, electronic scales, printers, PLCs, and attendance machines.

6. SPECIFICATIONS

Feature	Specification
Brand	Vonets
Model Number	VAP11S

Feature	Specification
WiFi Standard	802.11b/g/n
Data Transfer Rate	300 Mbps
Frequency Band	2.4 GHz (Single-band)
Power Supply	DC 5V-24V (Typical 5V/2A)
Connections	1x RJ45 Ethernet, 1x USB (for power), 1x DC Power
Special Features	USB Print Server
Operating System	Linux
Item Weight	80 Grams
Device Dimensions	94 x 45 x 15 mm (approximate, from image)

7. TROUBLESHOOTING

If you encounter issues with your VAP11S, consider the following common troubleshooting steps:

- **No Power:** Ensure the power cable is securely connected and the power source (USB or DC) is providing adequate voltage (5V-24V). Check for power indicator lights on the device.
- **No WiFi Connection:** Verify that the VAP11S is configured correctly for the desired mode (Bridge, Repeater, Router, AP). Check the WiFi connection status light (Blue Light). Ensure the SSID and password entered during configuration match your network.
- **No Ethernet Connection:** Check the Ethernet cable connection to both the VAP11S and the connected device. Verify the Ethernet connection status light (Yellow Light). Try a different Ethernet cable.
- **Cannot Access Web Interface:** Ensure your computer's IP settings are compatible with the VAP11S's default IP range. Try resetting the device to factory defaults by pressing and holding the reset button for several seconds (refer to the device diagram for location).
- **Poor Signal/Slow Speed:** In Repeater mode, ensure the VAP11S is placed within good range of the main router. Adjust antenna orientation. Check for sources of interference.
- **Configuration Failure:** Review the configuration video or manual carefully to ensure all steps are followed precisely. Incorrect settings can lead to connectivity issues.

8. MAINTENANCE

To ensure optimal performance and longevity of your Vonets VAP11S, follow these maintenance guidelines:

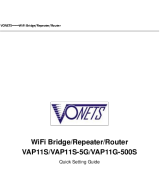

- **Cleaning:** Periodically clean the device with a soft, dry cloth. Avoid using liquid cleaners or solvents.
- **Ventilation:** Ensure the device is placed in a well-ventilated area to prevent overheating. Do not block ventilation openings.
- **Firmware Updates:** Check the official Vonets website periodically for firmware updates. Keeping the firmware updated can improve performance, add new features, and fix bugs.
- **Environmental Conditions:** Operate the device within its specified temperature and humidity ranges. Avoid exposure to extreme temperatures, direct sunlight, or moisture.

9. WARRANTY AND SUPPORT

For warranty information and technical support, please refer to the documentation included with your product or visit the official Vonets website. The manufacturer provides support resources and may offer specific warranty terms for your region.

- Industrial 24 VDC bridge rectifier/serial server
- Support wide voltage 90-260V power supply; two-stage automatic overvoltage protection (Protection voltage range: limit 270V; recovery 260V)
- Support RS-485 and RS-232C V2F transmission protocol
- Support RS-485 transmission rate: 2000bps;
- RF Power: 200mW/24dBm optional.
- Support RS-485 transmission distance: 300 meters;
- Support 3B1 interface extension, can be extended by extension cable (optional);
- On 100Mbps adaptive Ethernet Port, on RS-485 cable port, RS-485 port support TTL level: (VTH=1.3V or 0.9V; VTL=1.3V or 0.9V)
- Optional 100Mbps 232C accessories; RS-485 to RS-485 connector (Line 100Mbps RS-485 to RS-485); RS-485 to RS-485 connector
- Standard accessories include: terminal block, rack fitting kit and Industrial power supply; DC connector;
- Support RS-485 and RS-232C serial memory: 300 kbytes;
- Support connecting more than 20pcs V2F terminal at the same time;
- Adopt 100ms valid time confirmation technology to solve the user's trouble of configuration;
- Support RS-485 and RS-232C V2F V2F hardware;
- Support SSA signal strength detection reporting function to facilitate RFI while positioning;
- Support RS-485 and RS-232C V2F import and export function to realize bidirectional configuration of engineering projects;
- Support IP layer transparent transmission and MAC layer transparent transmission two bridge modes to meet various bridge mode

- Industrial 2.4 GHz Wi-Fi bridges/router/access
- Support wide variety 802.11n power/cover, support automatic over/underlay protection (Prevention voltage/over/under limit 29V)
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol
- Wi-Fi transmission rate: 300Mbps
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol
- Point-to-point maximum transmission distance: 500 meters
- Zero-configuration, automatic, can be extended by extension cables (optional)
- 20 to 100Mbps adaptive Ethernet ports, and provide optional PoE power supplying
- Standard industrial design, rugged, fireproof, anti-static, and industrial grade
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol
- Wi-Fi hotspot support, maximum capacity: 200 hotspots
- Support connecting more than 2000 Wi-Fi terminals at the same time
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol to solve the user's trouble of configuration
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol
- Support 802.11n signal strength detection protection function to realize Wi-Fi stable positioning
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol to facilitate field configuration of engineering project
- Support 1000Mbps to 10Gbps to RF/Coaxial protection protocol
- Support transparent transmission two bridge modes to meet various field applications
- Support transparent transmission (factory default), transparent transmission of IP layer data, can meet most of the bridge applications
- MAC layer transparent transmission all over the MAC layer (this layer) and the MAC layer, including IP layer applications (this layer) and the MAC layer, such as GPRS core, GPRS IP, Ethernet, etc.
