4. SETUP AND INSTALLATION

Proper setup is crucial for the optimal performance of your portable air conditioner. Follow these steps for installation:

1. **Unpack:** Carefully remove the air conditioner and all accessories from the packaging. Ensure you have the unit, exhaust hose, window kit, and remote control.
2. **Positioning:** Place the unit on a firm, level surface near a window and a grounded electrical outlet. Ensure there is at least 20 cm (8 inches) of space around the unit for proper air circulation.
3. **Install Window Kit:**
 - Assemble the window sealing plate kit according to your window type (sliding or casement).
 - Secure the window kit in the open window, ensuring a tight seal to prevent air leakage.
4. **Attach Exhaust Hose:**
 - Connect one end of the exhaust hose to the air outlet on the back of the unit.
 - Connect the other end of the exhaust hose to the adapter in the window kit. Extend the hose as little as possible and avoid sharp bends to maximize efficiency.
5. **Drainage (Dehumidification/Cooling):** For continuous drainage during dehumidification or cooling in high humidity, connect a drain hose (not included) to the continuous drain port and lead it to a floor drain or suitable container. Otherwise, the internal water tank will collect condensate and require manual emptying.
6. **Power Connection:** Plug the power cord into a grounded 230 Volt electrical outlet.

6. MAINTENANCE

Regular maintenance ensures the longevity and efficient operation of your air conditioner.

- **Cleaning the Air Filter:**

- Turn off and unplug the unit before cleaning.
- Remove the air filter (location typically on the back or side, refer to diagrams in the full manual if available).
- Clean the filter with a vacuum cleaner or wash it gently with lukewarm water and mild detergent. Rinse thoroughly and allow it to air dry completely before reinserting.
- Clean the air filter every two weeks or more frequently if the unit is used often or in dusty environments.

- **Draining Water:**

- When the internal water tank is full, the unit will stop operating and an indicator light will illuminate.
- Place a shallow pan or tray under the drain port at the bottom rear of the unit.
- Remove the drain plug to allow water to flow out. Replace the plug once the tank is empty.

- **Cleaning the Unit Exterior:** Wipe the exterior with a soft, damp cloth. Do not use harsh chemicals, abrasives, or solvents.

- **Storage:** If storing the unit for an extended period, ensure the water tank is completely drained and the unit is clean and dry. Store it in a cool, dry place, preferably in its original packaging.

7. TROUBLESHOOTING

Before contacting customer support, please refer to the following common issues and solutions:

| Problem | Possible Cause | Solution |
|--|---|--|
| Unit does not turn on. | No power, power cord unplugged, circuit breaker tripped. | Check power connection, reset circuit breaker. |
| Unit is running but not cooling/heating. | Air filter dirty, exhaust hose blocked/disconnected, room too large, doors/windows open. | Clean air filter, check hose connection, close doors/windows, ensure unit is sized for the room. |
| Water leakage. | Drain plug loose, continuous drain hose blocked or improperly connected, water tank full. | Ensure drain plug is secure, check drain hose, empty water tank. |
| Unit is noisy. | Unit not on a level surface, fan obstruction. | Place on a level surface, check for obstructions in fan area. |
| Remote control not working. | Batteries dead or incorrectly inserted, obstruction between remote and unit. | Replace batteries, ensure clear line of sight to unit's receiver. |
