2.1 Initial Setup with Somfy Protect App

1. **Download the App:** Download the "Somfy Protect" application from your smartphone's app store (iOS or Android).
2. **Create Account:** Open the app and create a new user account or log in if you already have one.

4. **Component Pairing:** Pair each component (siren, motion detector, IntelliTAGs, keypad, badges) with the central unit as prompted by the app.

2.2 Component Placement

- **Link Advanced:** Place the central unit in a central location within your home, away from large metal objects that might interfere with wireless signals.
- **IntelliTAG Sensors:** Attach IntelliTAG sensors to doors and windows you wish to protect. Ensure they are placed on the frame, not the moving part, for optimal vibration detection.
- **Indoor Keypad:** Mount the indoor keypad near your main entry point for convenient arming and disarming.
- **Indoor Siren:** Position the siren in a location where its sound can be heard throughout the protected area.

- **Motion Detector:** Install the motion detector in a strategic area to cover main pathways or valuable areas, avoiding direct sunlight or heat sources.

4. MAINTENANCE

To ensure the continuous and reliable operation of your Somfy Home Alarm Advanced system, regular maintenance and awareness of its features are important.

4.1 Power and Connectivity Backup

- **Battery Backup:** In the event of a power outage, the system's internal battery provides up to 14 days of operational autonomy, ensuring your home remains protected.

- **GSM Network Backup:** The Home Alarm Advanced includes a backup GSM network feature. This ensures you continue to receive alerts even if your internet connection is lost. This service is free for 5 years in EU countries (subject to GSM coverage) and can be subscribed to thereafter.

4.2 System Integrity

The system is designed to detect attempts to neutralize it. You will be immediately informed of any attempts at opening, tampering, or radio jamming of the system components.

5. TROUBLESHOOTING

If you encounter issues with your Somfy Home Alarm Advanced, consider the following common troubleshooting steps:

- **False Alarms:** If IntelliTAG sensors are triggering false alarms (e.g., due to vibrations from heavy vehicles), adjust the sensitivity setting within the Somfy Protect app. Lowering the sensitivity can help prevent unwanted triggers.
- **Component Connection Issues:** Ensure all components are within range of the Link Advanced central unit. Check battery levels of individual sensors and replace them if necessary. Re-pairing a component through the Somfy Protect app can resolve connectivity problems.
- **App Notifications:** Verify that push notifications are enabled for the Somfy Protect app in your smartphone's settings. Check your internet connection or GSM coverage if alerts are not being received.
- **Power/Internet Outage:** Confirm if the system is operating on battery backup. If the internet is down, ensure your GSM service is active for alerts.
- **System Tampering Alerts:** If you receive alerts about tampering or jamming, inspect the physical integrity of your system

components.
