Bestway TriTech Connect and Rest 3-in-1 Air Mattress User Manual

Model: 67922

INTRODUCTION

The Bestway TriTech Connect and Rest 3-in-1 Air Mattress is designed for durability and versatility, offering multiple sleeping configurations. This manual provides essential information for the safe and effective use of your air mattress, including setup, operation, maintenance, and specifications.

The internal structure of this air mattress features Tritech material, engineered for enhanced durability and strength. This material helps the mattress maintain its shape over time and minimizes air loss, providing consistent firmness and contoured support.

SAFETY INFORMATION

- **Do not overinflate:** Overinflation can damage the mattress and void the warranty.
- **Keep away from sharp objects:** Avoid placing the mattress near sharp objects or rough surfaces to prevent punctures.
- **Avoid extreme temperatures:** Do not expose the mattress to direct sunlight for extended periods or extreme cold, as this can affect material integrity.
- **Weight capacity:** Adhere to the maximum weight capacity of 150 kg (330 lbs) per single mattress.
- **Children supervision:** Always supervise children when they are using the air mattress.
- **Flammable materials:** Keep the mattress away from open flames and heat sources.

PACKAGE CONTENTS

Verify that all components are present in the package:

- 2 x Connectable Air Mattresses
- 1 x Repair Patch

SETUP

Inflation

1. Unroll the air mattress on a clean, flat surface.
2. Locate the 2-way quick release valve on the side of the mattress.
3. Open the valve cap.
4. Insert the nozzle of an air pump (not included) into the valve.
5. Inflate the mattress until it is firm to the touch but not rigid. Avoid overinflation.
6. Remove the pump and securely close the valve cap.

Configuration Options

The Bestway TriTech Connect and Rest air mattress offers three versatile configurations:

1. Two Twin Beds

Use each air mattress separately as individual twin beds. This is ideal for accommodating two people in different areas or for individual use.

configuration.

2. One King Bed

Connect the two air mattresses side-by-side to form a larger king-sized sleeping surface. Locate the adjustable buckles on the sides of each mattress and securely fasten them together.

3. One Stacked Twin Bed

Stack one air mattress on top of the other to create a double-layer twin bed, providing increased height and comfort. Use the adjustable buckles to secure the top mattress to the bottom one.

OPERATING

General Use

- Ensure the mattress is fully inflated and the valve cap is securely closed before use.
- Avoid jumping or standing on the mattress to prevent damage.
- The mattress is suitable for both indoor and outdoor use, but protect it from sharp objects and extreme weather conditions when used outdoors.

Deflation

1. Open the 2-way quick release valve cap.
2. Allow the air to escape naturally. You can gently press on the mattress to speed up the deflation process.
3. Once deflated, fold or roll the mattress for storage.

MAINTENANCE

Cleaning

- Clean the mattress with a damp cloth and mild soap. Do not use harsh chemicals or abrasive cleaners.
- Ensure the mattress is completely dry before storing to prevent mold or mildew.
- The product care instructions state "Machine Wash", however, for an air mattress, spot cleaning is generally recommended. Please refer to the specific care label on your product for detailed instructions.

Storage

- Store the deflated and dry mattress in a cool, dry place, away from direct sunlight and extreme temperatures.

- Keep it away from pests and sharp objects.

Repair Patch Usage

- In case of a small puncture, use the included repair patch.
- Clean and dry the damaged area thoroughly.
- Peel off the backing from the repair patch and firmly press it over the puncture.
- Allow several hours for the patch to adhere completely before reinflating the mattress.

TROUBLESHOOTING

Air Loss

- **Check valve cap:** Ensure the valve cap is securely closed after inflation.
- **Inspect for punctures:** Examine the mattress surface for any small holes or tears. Use soapy water to locate leaks (bubbles will form). Apply the repair patch as instructed.
- **Temperature changes:** Air mattresses can lose some firmness due to temperature drops. Re-inflate slightly if needed.

Difficulty Inflating/Deflating

- **Check pump connection:** Ensure the air pump nozzle is properly inserted into the valve.
- **Valve obstruction:** Verify that the valve is clear of any debris.
