AVENT SCY703/04

Philips Avent Anti-Colic Baby Bottle with AirFree Vent (SCY703/04) Instruction Manual

1. INTRODUCTION

This manual provides essential information for the safe and effective use of your Philips Avent Anti-Colic Baby Bottle with AirFree Vent. This bottle is designed to help reduce common feeding issues such as colic, gas, and reflux by keeping the nipple full of milk and minimizing air ingestion.

Designed to reduce feeding issues

2. COMPONENTS

Your Philips Avent Anti-Colic Baby Bottle package includes the following components:

- Bottle (9 oz capacity)
- Nipple (Flow 2, suitable for 1m+ babies)
- Screw ring
- AirFree Vent
- Cap

Easy to clean and assemble

3. SETUP AND ASSEMBLY

Before first use, disassemble all parts and clean them thoroughly. Refer to the 'Maintenance and Cleaning' section for detailed instructions.

3.1 Assembling the Bottle with AirFree Vent

1. Insert the AirFree vent into the bottle, ensuring the small arrow on the vent aligns with the arrow on the bottle.
2. Place the nipple into the screw ring, pulling it through until it is securely seated.
3. Screw the assembled nipple and screw ring onto the bottle. Ensure it is tightened securely to prevent leaks.
4. Place the cap over the nipple for hygiene and transport.

The bottle can also be used without the AirFree vent if preferred, by simply assembling the nipple and screw ring directly onto the bottle.

4. OPERATING INSTRUCTIONS

4.1 Feeding Position

The AirFree vent is designed to keep the nipple full of milk even when the bottle is held horizontally, facilitating upright feeding. Feeding in an upright position can help reduce reflux and aid in digestion.

Nipple stays full of milk even
when held horizontal
**for easier upright
feeding**

Image 4.1: A diagram illustrating how the nipple remains full of milk even when the bottle is held horizontally, enabling upright feeding.

4.2 AirFree Vent Functionality

The unique AirFree vent draws air away from the nipple, preventing air ingestion by your baby. This helps to minimize the intake of air, which is a common cause of colic, gas, and reflux.

For less air ingestion, the

nipple full of milk**

Image 4.2: A diagram demonstrating the AirFree vent's mechanism, showing how it diverts air away from the nipple to prevent air ingestion.

4.3 Nipple Flow Rates

Philips Avent Anti-Colic nipples are available in various flow rates to accommodate your baby's developmental stage. The included nipples are Flow 2, suitable for babies 1 month and older. Ensure you select the appropriate flow rate for your baby's age and feeding needs.

5. MAINTENANCE AND CLEANING

Proper cleaning and sterilization are crucial for your baby's health.

5.1 Disassembly

Before cleaning, fully disassemble the bottle into its individual components: bottle, nipple, screw ring, AirFree vent, and cap.

5.2 Cleaning

- **Hand Washing:** Wash all components in warm, soapy water using a clean brush. Rinse thoroughly.
- **Dishwasher:** All components are dishwasher safe. Place them on the top rack for cleaning.

5.3 Sterilization

After cleaning, sterilize all parts using one of the following methods:

- **Boiling:** Place disassembled parts in boiling water for 5 minutes.
- **Steam Sterilizer:** Use a Philips Avent steam sterilizer or another suitable sterilizer according to its instructions.
- **Cold Water Sterilization:** Use sterilization tablets/liquid according to manufacturer's instructions.

Ensure all parts are completely dry before reassembling or storing.

6. TROUBLESHOOTING

The Philips Avent Anti-Colic bottle is specifically designed to address common feeding discomforts. If your baby experiences issues, consider the following:

- **Colic, Gas, or Reflux:** The AirFree vent is engineered to reduce air ingestion, which is a primary cause of these issues. Ensure the AirFree vent is correctly assembled and positioned during feeding.
- **Leaking:** Ensure all bottle components, especially the nipple and screw ring, are securely tightened. A loose nipple top can cause spills.
- **Slow or Fast Flow:** Verify that the nipple flow rate is appropriate for your baby's age and feeding pace. If the flow is too slow, your baby may become frustrated; if too fast, they may struggle to keep up.
- **Nipple Collapse:** This can indicate that the vent system is not functioning optimally or that the nipple flow rate is too slow for your baby's sucking strength. Check the AirFree vent assembly and consider a higher flow nipple if appropriate.

If problems persist, consult with a healthcare professional or pediatrician.

7. SPECIFICATIONS

Feature	Detail
Model Number	SCY703/04
Capacity	9 ounces
Material Composition	80% plastic, 20% silicone
Material Free	BPA Free
Bottle Nipple Type	Vented (Flow 2, 1m+)
Dishwasher Safe	Yes
Item Weight	12.3 ounces (for the pack)

8. WARRANTY AND SUPPORT

For information regarding product warranty, returns, or additional support, please refer to the official Philips Avent website or contact their customer service directly. Keep your proof of purchase for any warranty claims.
