SHA CERLIN XH-6861-BKQ

SHA CERLIN Queen Size Bed Frame Instruction Manual

Model: XH-6861-BKQ

Product Overview

The SHA CERLIN Queen Size Bed Frame is a modern, heavy-duty platform metal base designed to provide robust support for your mattress without the need for a box spring. It features a square footboard and a stylish headboard, enhancing the aesthetic of any bedroom.

Important Safety Information

Please read and understand all instructions before assembly and use. Failure to follow these instructions may result in injury or damage to the product.

- Exercise caution around sharp edges during assembly.
- Ensure all components are properly assembled and tightened to prevent instability.
- Maintain the rubber strips on the slats to prevent noise and ensure mattress stability.
- Do not exceed the maximum weight capacity of 900 lbs.
- Keep small parts away from children during assembly.

Parts List

Before beginning assembly, verify that all parts are present and undamaged. Refer to the included hardware pack for specific component identification.

- Headboard
- Footboard
- Side Rails (Left and Right)
- Support Legs
- Slats (Multiple pieces)
- Hardware (Bolts, Nuts, Washers, Allen Wrench, Screwdriver)
- Rubber Strips (for slats)
- Plastic Foot Plugs

Assembly Instructions

Assembly of the SHA CERLIN bed frame is designed to be straightforward and typically takes about 30 minutes for an adult. No additional tools are required beyond those provided.

1. **Unpack and Identify Parts:** Carefully unpack all components and lay them out. Match the numbers on the parts to the corresponding numbers in the instruction manual.
2. **Assemble Headboard and Footboard:** Attach the side rails to the headboard and footboard using the provided hardware. Ensure all connections are secure but do not fully tighten bolts until the frame is fully assembled.
3. **Install Center Support:** Attach the center support legs and beam to the frame as indicated in the manual.
4. **Place Slats:** Position the metal slats across the frame. The closely spaced slats are designed to support your mattress directly. Ensure the rubber strips are properly placed on the slats to prevent noise. Some slats may feature a Velcro fixing structure for stronger attachment and noise reduction.

5. **Final Tightening:** Once all components are in place, systematically tighten all bolts to ensure a stable and secure frame.
6. **Attach Protective Pads:** All legs are assembled with plastic plugs to prevent scratching your floor. Ensure these are securely in place.

Operating Instructions

This bed frame is designed for use with a Queen size mattress, ideally between 10 to 14 inches in height. The embedded design of the frame helps to fix the mattress in place, preventing it from slipping.

- Place your Queen size mattress directly onto the assembled slats. No box spring is needed.
- Ensure the mattress fits snugly within the frame to utilize the anti-slip embedded design.
- The bed frame provides approximately 12.4 inches of under-bed clearance, offering convenient storage space.

Image: Visual comparison of embedded vs. non-embedded bed designs, showing how the embedded design prevents mattress sliding and recommending a mattress height of 10-14 inches.

Maintenance

To ensure the longevity and optimal performance of your SHA CERLIN bed frame, follow these simple maintenance guidelines:

- Regularly check all bolts and connections to ensure they remain tight. Re-tighten if necessary.
- Wipe down the metal frame with a soft, damp cloth. Avoid abrasive cleaners or harsh chemicals.
- Inspect the rubber strips on the slats periodically for wear and tear. Replace if damaged to maintain noise reduction.
- Ensure the plastic foot plugs are intact to protect your flooring.

Troubleshooting

Problem	Possible Cause	Solution

Problem	Possible Cause	Solution
Bed frame squeaks or makes noise.	Loose bolts; worn rubber strips on slats.	Tighten all bolts. Check and replace worn rubber strips. Ensure slats are properly seated.
Mattress slides on the frame.	Mattress not properly aligned; embedded design not fully utilized.	Ensure the mattress is centered and fully within the embedded frame edges. Verify rubber strips are intact.
Difficulty assembling parts.	Incorrect part orientation; bolts not aligned.	Refer to the instruction manual and ensure matching numbers on parts are correctly aligned. Do not overtighten bolts until all connections are made.
