4. INSTALLATION GUIDE

Follow these steps to properly install the snap fasteners. It is recommended to practice on a scrap piece of material first.

Important Considerations:

- Suitable for light to medium fabrics. Not recommended for thick fabrics like wool blankets.
- For lightweight, mesh, knitted, stretch, or worn fabrics, line the back of the fabric to prevent tearing.
- Use a sturdy surface and a hammer for installation.

Step-by-Step Installation:

1. **Prepare the Fabric:** Determine the exact installation position for the snap. Place the anvil tool underneath the fabric at the desired spot.
2. **Punch the Hole:** Use the punch tool and a hammer to create a hole in the fabric. Ensure the hole is clean and appropriately sized for the snap post.
3. **Install the Cover and Socket (Female Part):**
 - a. Insert the post of the **Cover** part through the punched hole from the front of the fabric.
 - b. Place the **Socket** part over the cover's post on the back side of the fabric.
 - c. Position the flaring tool over the cover's post and tap it vertically with a hammer until the post is flared and flattened, securing the cover and socket together.
4. **Install the Stud and Washer (Male Part):**
 - a. On the corresponding fabric piece, punch another hole for the male part.
 - b. Insert the post of the **Stud** part through the punched hole from the front of the fabric.
 - c. Place the **Washer** part over the stud's post on the back side of the fabric.
 - d. Position the flaring tool over the stud's post and tap it vertically with a hammer until the post is flared and flattened, securing the stud and washer together.
5. **Test the Snap:** Once both halves are installed, connect them to ensure they snap together securely.

5. OPERATING AND USAGE

Once installed, the snap fasteners provide a reliable closure. To operate, simply press the two halves together until you hear or feel a click, indicating a secure connection. To open, gently pull the two fastened parts apart.

6. MAINTENANCE

The snap fasteners are made of quality copper material, designed to be durable, corrosion, and rust-resistant. To maintain their appearance and functionality:

- Clean with a soft, dry cloth if necessary.
- Avoid harsh chemicals or abrasive cleaners.
- Store unused snaps and tools in a dry environment to prevent oxidation.

7. TROUBLESHOOTING

If you encounter issues during or after installation, consider the following:

- **Snaps Not Holding:** Ensure the fabric is not too thick for the 15mm snaps. Verify that the posts were properly flared and flattened during installation. Insufficient flaring can lead to a weak connection.

- **Fabric Tearing:** This can occur with very thin, stretchy, or worn fabrics. Always line the back of such materials to provide additional reinforcement before punching holes and installing snaps.
- **Punch Tool Wear:** The included punch tool may experience wear over time, especially with repeated use on tougher materials. If the punch becomes dull, it may not create clean holes. Consider using a cutting mat or hard rubber sheet underneath for better results and to prolong tool life.
- **Deformed Snaps:** Ensure you are tapping the flaring tool vertically and with consistent force. Uneven hammering can deform the snap components.

9. SAFETY INFORMATION

Please observe the following safety precautions:

- Keep small parts out of reach of children to prevent choking hazards.
- Use caution when using a hammer and punch tools to avoid injury. Always strike squarely.
- Wear appropriate eye protection during installation.

10. AFTER-SALES SERVICE AND SUPPORT
