1. **Install Faucet Body:** Insert the main faucet body into the center hole of your sink. If using a 3-hole sink, place the deck plate over the holes first. Secure it from underneath with the provided washer and mounting nut.
2. **Install Handle and Soap Dispenser:** Insert the handle and soap dispenser into their respective holes. Secure them from underneath with their mounting hardware.
3. **Connect Water Supply Lines:** Attach the hot and cold water supply lines to the corresponding connections on the faucet body and to your hot and cold water stops. Ensure a tight seal.
4. **Connect Sprayer Hose:** Connect the pull-down sprayer hose to the quick-connect fitting under the faucet.
5. **Attach Weight:** Install the counterweight onto the pull-down sprayer hose at the indicated position. This ensures smooth retraction of the spray head.

6. **Test for Leaks:** Slowly turn on the main water supply and check all connections for leaks.
7. **Flush System:** Before first use, remove the spray head and flush the faucet for a few minutes to clear any debris from the water lines. Reattach the spray head.

The single handle controls both water flow and temperature:

- **Turn On/Off:** Lift the handle to turn on the water. Push it down to turn off.
- **Adjust Flow:** The further you lift the handle, the greater the water flow.
