## MAINTENANCE

- **Inspection:** Periodically check all fasteners to ensure they remain tight. Retighten if necessary to maintain stability.

Ensure all screws are fully tightened. Verify that the unit is placed on a completely level surface. If wobbling persists, re-check assembly steps and confirm all parts are correctly aligned. The anti-tip kit should be securely installed to the wall for maximum stability.

- **Toilet lid hits the bottom shelf:**

This unit is designed to clear most standard toilet lids. If obstruction occurs, check the placement of the unit. Ensure it is pushed back as far as possible without interfering with the toilet's function. Measure your toilet's height and compare it with the unit's clearance specifications (approximately 37.5 inches / 95 cm from the floor to the bottom of the lowest shelf).

- **Difficulty with screw insertion or wood splitting:**

Always use the provided Allen key and avoid power tools, which can cause overtightening and damage. If a screw is difficult to insert, ensure it is aligned correctly with the pre-drilled hole. Do not force screws. If wood splitting occurs, contact customer support for assistance.
