

Calibrite CCSTUDIO

Calibrite ColorChecker Studio (CCSTUDIO) Instruction Manual

Comprehensive guide for monitor, projector, scanner, and printer profiling.

[Setup](#) [Operating Instructions](#) [Maintenance](#) [Troubleshooting](#) [Specifications](#) [Warranty & Support](#)

INTRODUCTION

The Calibrite ColorChecker Studio (CCSTUDIO) is a comprehensive color management solution designed for photographers, filmmakers, designers, and content creators. This device, powered by X-Rite technology, provides accurate color profiling for monitors, projectors, scanners, and printers, ensuring consistent and reliable color reproduction across your entire workflow. This manual provides detailed instructions for setting up, operating, and maintaining your CCSTUDIO device.

Image: Calibrite ColorChecker Studio device, ColorChecker Classic Mini target, USB cable, and packaging.

1. SETUP

1.1 Unboxing and Components

Carefully unpack your Calibrite ColorChecker Studio. The package should contain the following items:

- **Spectrophotometer:** The main color measurement device.
- **Case/Monitor Profiling Attachment:** Used to position the spectrophotometer on your display.
- **USB Cable:** For connecting the device to your computer.
- **ColorChecker Classic Mini Target:** A small color chart used for camera profiling.

1.2 Software Installation

The Calibrite ColorChecker Studio requires software for operation. Download the latest **ccStudio** software from the official Calibrite website. Follow the on-screen instructions to complete the installation. Ensure your operating system meets the minimum requirements for the software.

1.3 Connecting the Device

Connect the spectrophotometer to your computer using the provided USB cable. The device is powered via USB. If your computer lacks a standard USB-A port, a suitable adapter (not included) may be required.

2. OPERATING INSTRUCTIONS

2.1 Monitor and Display Profiling

The CCSTUDIO allows for precise calibration and profiling of your monitors and displays. This process ensures accurate color representation, which is crucial for consistent visual work.

1. **Prepare Your Display:** Ensure your display has been on for at least 30 minutes to stabilize. Clean the screen surface.
2. **Launch ccStudio Software:** Open the installed ccStudio application on your computer.
3. **Select Monitor Profiling:** Follow the software prompts to select the monitor profiling workflow.
4. **Position the Spectrophotometer:**
 - Attach the monitor profiling attachment to the spectrophotometer.
 - Hang the device over your display, ensuring the sensor rests flat against the screen in the designated area (usually the center). The counterweight on the USB cable helps stabilize the device.

Image: Spectrophotometer positioned on an Apple monitor for calibration.

Image: Spectrophotometer positioned on a BenQ monitor for calibration.

5. **Ambient Light Measurement:** The device can automatically determine the optimum display luminance for comparing prints to your display by measuring the lighting conditions where prints will be viewed. Follow software prompts to perform this measurement.
6. **Start Profiling:** Initiate the profiling process within the software. The CCSTUDIO uses intelligent iterative profiling, an adaptive technology that produces optimized results for maximum color accuracy on each unique display.
7. **Save Profile:** Once complete, save the generated ICC profile. The software will automatically apply this profile to your operating system.

2.2 Projector Profiling

For accurate color projection, the CCSTUDIO can also profile projectors.

1. **Prepare Projector:** Set up your projector and projection screen. Ensure the projector has warmed up.
2. **Mount Spectrophotometer:** The spectrophotometer has a 1/4"-20 tripod mount on its base. Mount the device onto a tripod and position it to face the projected image squarely.
3. **Launch ccStudio and Select Projector Profiling:** Follow the software prompts.
4. **Start Profiling:** The software will guide you through displaying a series of colors and measuring them with the

spectrophotometer.

5. **Save Profile:** Save the generated profile.

2.3 Printer and Paper Profiling

Achieve consistent and accurate prints by creating custom profiles for your printer and paper combinations.

1. **Print Test Charts:** The ccStudio software will generate test charts that you need to print using your printer and the specific paper you wish to profile. Ensure all color management settings in your printer driver are turned OFF during this step.
2. **Allow Prints to Dry:** Let the printed test charts dry completely according to the paper manufacturer's recommendations (typically 15-30 minutes).
3. **Measure Test Charts:** Use the spectrophotometer to scan the color patches on the printed charts. The software will guide you through this process, often involving sliding the device along rows of patches.

Image: Scanning a printed color chart for printer profiling.

4. **Save Profile:** The software will create a custom ICC profile for your printer and paper combination. Save this profile.

2.4 Camera Profiling

Use the included ColorChecker Classic Mini target with the ColorChecker Camera Calibration software (download separately) to create custom camera profiles. This helps achieve accurate and consistent color from your camera files.

1. **Capture Image:** Photograph the ColorChecker Classic Mini target under the lighting conditions of your shoot. Ensure the target is well-lit and fills a significant portion of the frame.
2. **Process in Software:** Import the image into the ColorChecker Camera Calibration software. The software will analyze the target and create a custom DNG profile.
3. **Apply Profile:** Apply the generated profile in your RAW image processing software (e.g., Adobe Lightroom, Camera Raw) for accurate color rendition.

2.5 Instructional Videos

How To Get Your Color Right with Calibrite Display 123

Your browser does not support the video tag.

Your browser does not support the video tag.

Video: A detailed guide on generating your first printer profile using Datacolor SpyderPRINT, covering setup, printing test charts, and measuring for accurate print output.

3. MAINTENANCE

3.1 Cleaning the Device

To ensure accurate measurements, keep the spectrophotometer's sensor clean. Use a soft, lint-free cloth to gently wipe the sensor surface. Avoid using abrasive cleaners or solvents.

3.2 Recalibration Schedule

Monitors and projectors can drift in color over time. It is recommended to recalibrate your displays regularly, typically once a month or as needed, to maintain optimal color accuracy. The ccStudio software may include a "Monitor Quick Check" utility to help determine if recalibration is necessary.

4. TROUBLESHOOTING

- **Device Not Recognized:**

- Ensure the USB cable is securely connected to both the device and the computer.
- Try a different USB port or a different USB cable.
- Restart your computer and relaunch the ccStudio software.
- Verify that the necessary drivers are installed. Check the Calibrite support website for driver updates.

- **Inaccurate Color Results:**

- Ensure the display surface is clean and free of dust or smudges.
- Confirm that the spectrophotometer is positioned correctly on the display, resting flat against the screen.
- Check ambient lighting conditions. Excessive glare or inconsistent lighting can affect measurements.
- For printer profiling, ensure all color management settings in the printer driver were disabled when printing the test charts.

- **Software Issues:**

- Update the ccStudio software to the latest version.
- Consult the software's built-in help or user guide for specific error messages.

5. SPECIFICATIONS

Feature	Detail
Model Number	CCSTUDIO
Manufacturer	Calibrite (Powered by X-Rite)
Product Dimensions	5 x 4 x 2 inches
Item Weight	14.5 ounces
Connectivity	USB (cable included)
Profiling Capabilities	Monitor, Display, Projector, Scanner, Printer/Paper, Camera
Profiling Technology	Intelligent Iterative Profiling for displays, Ambient Light Measurement
Included Accessories	Spectrophotometer, Case/Monitor Profiling Attachment, USB Cable, ColorChecker Classic Mini Target

6. WARRANTY & SUPPORT

6.1 Product Warranty

The Calibrite ColorChecker Studio (CCSTUDIO) typically comes with a one-year manufacturer's warranty covering defects in materials and workmanship. Please retain your proof of purchase for warranty claims. For specific warranty terms and conditions, refer to the documentation included with your product or visit the official Calibrite website.

6.2 Customer Support

For technical assistance, software updates, or additional support, please visit the official Calibrite support page. You can find FAQs, troubleshooting guides, and contact information for direct support.

- **Online Support:** www.calibrite.com/support

- **Software Downloads:** Ensure you download the latest ccStudio software for optimal performance.
