## Squire CP50S (L32335)

# SQUIRE CP50S All Terrain Combination Padlock

Model: L32335

## INTRODUCTION

---

The SQUIRE CP50S All Terrain Combination Padlock (Model L32335) is engineered for robust security and durability in challenging environments. Featuring a recodable 4-wheel combination and a protective cover for the combination wheels, this padlock offers 10,000 locking variations. Its design incorporates corrosion resistance and an anti-pick mechanism, making it a reliable choice for securing your valuables in various conditions.

## SETUP AND INITIAL COMBINATION SETTING

---

Your SQUIRE CP50S padlock is factory set to open at **0-0-0-0**. It is highly recommended to change this combination immediately to a personal, memorable code for enhanced security.

Figure 3: The padlock with its shackle in the open position, illustrating the state required for combination resetting.

### To Set Your New Combination:

1. Ensure the padlock is open and set to the current combination (factory default is 0-0-0-0).
2. Rotate the shackle 90 degrees counter-clockwise from its locked position.
3. Press the shackle down firmly into the padlock body. While holding it down, rotate the shackle another 90 degrees counter-clockwise (total 180 degrees from original locked position).
4. With the shackle held down and rotated, set your desired 4-digit combination by rotating the dials. Choose a combination that is easy for you to remember but difficult for others to guess.
5. Once your new combination is set, lift the shackle to release it from the pressed-down position.
6. Rotate the shackle back to its original open position (90 degrees clockwise from the pressed-down position).
7. Close the shackle and scramble the dials to lock the padlock. Your new combination is now set.

**Important:** Make a note of your new combination and store it in a secure place. Do not store it inside the padlock or near the padlock itself.

## OPERATING THE PADLOCK

---

### To Open the Padlock:

1. Align the combination wheels to your personal 4-digit code.
2. Pull the shackle upwards to release it from the padlock body.

### To Close and Lock the Padlock:

1. Insert the shackle firmly into the padlock body until it clicks into place.

2. Scramble the combination wheels to a random set of numbers. This secures the padlock and prevents unauthorized opening.

The padlock features a protective cover over the combination wheels. Ensure this cover is properly seated to protect the mechanism from dirt, dust, and moisture, especially in all-terrain conditions.

## MAINTENANCE

Proper maintenance will extend the life and ensure the smooth operation of your SQUIRE CP50S padlock.

- **Cleaning:** Periodically wipe down the padlock with a clean, damp cloth to remove dirt and grime. For stubborn dirt, a mild soap solution can be used, followed by thorough drying.
- **Lubrication:** Apply a small amount of silicone-based lubricant or graphite powder to the shackle mechanism and combination wheels once or twice a year, or more frequently if used in harsh, dusty, or wet environments. Avoid oil-based lubricants as they can attract dirt.
- **Protective Cover:** Always ensure the protective cover over the combination wheels is properly closed when the padlock is not in use to prevent ingress of water, dust, and debris.
- **Storage:** When not in use for extended periods, store the padlock in a clean, dry environment.

## TROUBLESHOOTING

If you encounter issues with your padlock, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Padlock will not open with the correct combination.	Dials not perfectly aligned; internal mechanism jammed; incorrect combination remembered.	Ensure each number is precisely centered in the window. Wiggle the shackle while entering the combination. If recently reset, double-check the new combination. Apply lubricant if stiff.
Shackle is stiff or difficult to close/open.	Dirt/debris in the mechanism; lack of lubrication; corrosion.	Clean the shackle and shackle holes. Apply silicone-based lubricant or graphite powder to the shackle and internal mechanism.

Problem	Possible Cause	Solution
Combination wheels are hard to turn.	Dirt/debris under the wheels; lack of lubrication.	Clean around the wheels. Apply a small amount of silicone-based lubricant or graphite powder to the wheel mechanism.
Cannot reset the combination.	Shackle not rotated or pressed down correctly; not at the correct combination.	Ensure the padlock is open and set to the current combination. Follow the combination setting steps precisely, ensuring the shackle is fully pressed down and rotated to the correct position.

If the problem persists after attempting these solutions, please contact Squire customer support for further assistance.

## SPECIFICATIONS

Feature	Detail
Brand	Squire
Model Number	L32335
Lock Type	Combination Lock
Combination	4-wheel, Recodable (10,000 variations)
Material	Metal (Corrosion Resistant)
Special Features	Designed to withstand harsh weather conditions, Anti-pick extra secure mechanism, Protective cover over combination wheels
Color	Black & Blue
Finish Type	Polished
