6. TROUBLESHOOTING

If you encounter issues with your BTU Desktop Power Outlet, refer to the following common troubleshooting steps:

Problem	Possible Cause	Solution
No power from AC outlets	Power strip not plugged in; Wall outlet not working; Overload.	Ensure the power strip is securely plugged into a live wall outlet. Test the wall outlet with another device. Reduce the number of connected devices to prevent overload.
USB ports not charging	Device cable faulty; Device not compatible; USB ports overloaded or damaged.	Try a different USB cable. Ensure your device is compatible with 5V/2.1A charging. Disconnect other USB devices. If the issue persists, the USB ports may be damaged.
Power strip feels hot	Overload; Poor ventilation.	Immediately unplug all devices and the power strip from the wall. Allow it to cool down. Ensure total connected load does not exceed 12A. Place the power strip in a well-ventilated area.

If the problem persists after trying these solutions, please contact BTU customer service for assistance.
