The remote can be programmed using either manual code entry or automatic search.

#### Method A: Manual Code Entry

1. Locate the brand code for your air conditioner from the provided code list (usually found in the remote's packaging or a separate leaflet).
2. Point the remote control towards your air conditioner.
3. Press and hold the **"SET"** button (or a similar button like **"BRAND"** if available, referring to the image, there are two "BRAND" buttons, use either for programming) for approximately 3 seconds until the code on the LCD display starts flashing.
4. Use the **Temperature Up (TEMP+)** or **Temperature Down (TEMP-)** buttons to input the 3-digit or 4-digit code for your AC brand.
5. Once the correct code is displayed, press the **"OK"** button to confirm. The code will stop flashing.
6. Test the remote by pressing the **Power** button. If the AC responds, the programming is successful. If not, repeat the process with the next code for your brand or try the automatic search method.

2. Point the remote control towards your air conditioner.
3. Press and hold the **"SET"** button (or **"BRAND"**) for approximately 6 seconds until the code on the LCD display starts flashing and automatically cycles through codes.
4. Observe your air conditioner. As soon as the AC responds (e.g., turns on, off, or changes mode), immediately release the **"SET"** or **"BRAND"** button.
5. Press the **"OK"** button to confirm the code.
