AONBOY F2-6+6

AONBOY Cat Water Fountain Filters F2-6+6 Instruction Manual

Model: F2-6+6

PRODUCT OVERVIEW

The AONBOY Cat Water Fountain Filters (F2-6+6) are designed to provide clean and fresh drinking water for your pets. This set includes 6 carbon filters and 6 foam filters, each individually packaged to ensure quality and hygiene. These filters are perfectly compatible with the AONBOY Pet Fountain F2 (2L plastic fountain).

The filters feature a triple filtration system:

- **Cotton Layer:** Effectively filters hair, debris, and other impurities.
- **Activated Carbon:** Removes chlorine, odors, and improves water taste.
- **Ion Exchange Resin:** Targets heavy metals and further purifies water quality.

This comprehensive filtration ensures your pet receives a healthier water source, contributing to their overall well-being.

SETUP AND INSTALLATION

1. Prepare the Filters

Before initial use, rinse both the carbon filter and the foam filter thoroughly under running water for at least 2 minutes. This helps remove any loose carbon dust and prepares the filter for optimal performance.

Rinse before Use, Replace Every 2-4 Weeks

Image: A hand rinsing the circular filter under running water in a sink. This step is crucial for removing loose carbon particles before installation.

Video: Demonstrates the process of soaking and rinsing the filter and sponge before use, ensuring proper preparation for the cat water fountain.

2. Install the Foam Filter

Locate the water pump inside your AONBOY Pet Fountain F2. Gently attach the foam filter to the intake of the water pump. The foam filter acts as a pre-filter, catching larger debris and hair before they reach the main carbon filter, thereby protecting the pump and extending its lifespan.

Video: Shows how to install the foam filter onto the water pump of a cat fountain, highlighting its role in protecting the pump.

3. Install the Carbon Filter

Place the rinsed carbon filter into the designated slot on the top tray of the fountain. Ensure it sits securely to allow water to flow through it effectively.

OPERATING THE FOUNTAIN WITH FILTERS

Once both filters are correctly installed and the fountain is assembled, fill the reservoir with water. The pump will draw water through the foam filter, then through the carbon filter, providing a continuous supply of fresh, filtered water for your pet. The triple filtration system works continuously to remove impurities, ensuring the water remains clean and appealing.

MAINTENANCE

Regular replacement of the filters is essential to maintain water quality and the longevity of your pet fountain.

- **Replacement Frequency:** Replace both the carbon filter and the foam filter every 2 to 4 weeks.

- **Increased Frequency:** If you have multiple pets using the fountain, or if the water appears visibly dirty, consider replacing the filters more frequently.
- **Rinsing:** Always rinse new filters before placing them in the fountain.

High-Quality Natural Filter Ingredients

Genuine AONBOY Filters

Other

Large Diameter Coconut Shell
Activated Carbon

- ✓ Developed pore structure
- ✓ Strong adsorption
- ✓ Can be used for a long time

VS

Ordinary Burnable Charcoal

- ✗ Large pores lead to poor filtration
- ✗ Slow absorption
- ✗ It is easy to lose the filtering effect, and the replacement frequency is high
