Model: SENY1507-14A

IMPORTANT SAFETY INFORMATION

WARNING: To reduce the risk of fire, electric shock, or injury, read all instructions before using this heater.

- Do not use an extension cord or power strip, which could overheat and result in a fire.
- Do not plug any other electrical devices into the same outlet as the heater.
- Place space heaters on level, flat surfaces.
- Never place heaters on cabinets, tables, furniture, or carpets, which can overheat and start a fire.
- Ensure the heater is placed away from flammable materials such as curtains, furniture, and bedding.
- Do not cover the heater. Covering the heater can cause overheating and fire.
- Always unplug the heater when not in use.
- Keep out of reach of children and pets.

MAINTENANCE

Regular maintenance ensures the longevity and efficient operation of your Senville heater. Always unplug the heater

and allow it to cool completely before performing any maintenance.

- **Cleaning:**
 - Wipe the exterior surfaces of the heater with a soft, damp cloth. Do not use abrasive cleaners or solvents.
 - Ensure no water enters the interior of the heater.
 - Do not immerse the heater in water.
- **Storage:**
 - If storing the heater for an extended period, clean it thoroughly.
 - Store the heater in a cool, dry place, preferably in its original packaging, to protect it from dust and damage.
 - Wrap the power cord neatly to prevent tangling or damage.
- **No User-Serviceable Parts:** This heater contains no user-serviceable parts. Do not attempt to open or repair the unit yourself. Any repairs should be performed by qualified service personnel.

TROUBLESHOOTING

If you experience issues with your Serville heater, please consult the following common problems and solutions before contacting customer support.

Problem	Possible Cause	Solution
Heater does not turn on.	Not plugged in securely. No power to the outlet. Overheat protection activated. Tip-over switch activated.	Ensure the power cord is firmly plugged into a grounded outlet. Check the circuit breaker or try a different outlet. Unplug the heater, wait 30 minutes for it to cool down, then plug it back in. Ensure the heater is on a flat, stable surface and upright.
Heater produces no heat or insufficient heat.	Temperature setting too low. Heat mode not selected. Room size too large for heater.	Increase the desired temperature setting. Press the Mode button to select a higher heat setting (Medium or High). Ensure the heater is appropriately sized for the room.
Heater makes unusual noises.	Normal expansion/contraction of metal. Loose part (unlikely for oil-filled).	Minor clicking or crackling sounds are normal as the oil heats and cools. If noises are loud or persistent, unplug the unit and contact customer support.

Built-In Safety Features

Reliable Protection for You and Your Family

Overheat Protection

Automatically shuts off if it gets too hot

Tip-Over Safety Switch

Turns off instantly if knocked over
