Installation Guide

Follow these steps to properly install your Royal Kraft Ceramic Pull Knobs. Basic tools such as a measuring tape, drill, and possibly a hacksaw and file (if bolt length adjustment is needed) may be required.

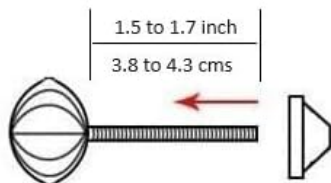

Installation Steps

1. **Prepare the Surface:** Ensure the cabinet door or drawer surface where the knob will be installed is clean and dry. Mark the desired drilling location.
2. **Drill the Hole:** Carefully drill a hole through the cabinet or drawer front at the marked location. The hole should be wide enough to accommodate the knob's bolt.
3. **Insert the Knob:** From the front of the cabinet or drawer, insert the knob's bolt through the drilled hole.
4. **Add Backplate and Washers:** On the inside of the cabinet or drawer, place the reversible metal backplate over the bolt, followed by the two washers.
5. **Secure with Nuts:** Thread the two nuts onto the bolt and tighten them securely. Ensure the knob is firm and does not wobble.
6. **Adjust Bolt Length (if necessary):** If the bolt extends too far into the cabinet, it may need to be trimmed. Use a hacksaw to cut the excess length and a metal file to smooth any sharp edges.

Care and Maintenance

To maintain the appearance and functionality of your ceramic pull knobs, follow these simple care instructions:

- **Cleaning:** Wipe the ceramic surface with a soft, damp cloth. Avoid using abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish and painted designs.
- **Tightening:** Periodically check the tightness of the nuts on the inside of your cabinet or drawer. If a knob feels loose, gently tighten the nuts with a wrench until secure, being careful not to overtighten.
- **Avoid Impact:** While durable, ceramic can chip or break if subjected to strong impacts. Handle with care.

Troubleshooting

If you encounter any issues during or after installation, consider the following common solutions:

- **Knob is Loose:** Ensure both nuts on the inside of the cabinet are fully tightened. If the bolt is too long, it might prevent proper tightening; consider trimming the bolt as described in the installation section.
- **Knob Does Not Fit:** Verify that the drilled hole is the correct size for the knob's bolt. Check the thickness of your cabinet board against the recommended fit (up to 1.1 inches).
- **Difficulty Turning/Tightening Nuts:** Ensure the bolt threads are clean and free of debris. Use a wrench for better grip and leverage.
