- **HDMI Inputs (1, 2, 3):** Connect your HDMI source devices (e.g., Blu-ray player, gaming console, streaming box).
- **HDMI OUT (ARC) to TV:** Connect to your TV or projector's HDMI input.
- **(ARC) to Sound 1:** Connect to your eARC/ARC compatible soundbar.
- **USB:** For firmware updates.
- **DC 5V:** Power input.

3. SETUP INSTRUCTIONS

Follow these steps to set up your FeinTech VAX04101A HDMI eARC Pass Switch:

3.1 Connection Diagram

What's in the box

Image: A diagram illustrating how to connect HDMI sources (gaming console, Blu-ray player, Apple TV) to the VAX04101A, which then connects to an Ultra-HD TV and an eARC soundbar.

1. Connect your HDMI source devices (e.g., Blu-ray player, gaming console, streaming box) to the **HDMI Inputs 1, 2, or 3** on the VAX04101A.
2. Connect the **HDMI OUT (ARC) to TV** port of the VAX04101A to an available HDMI input on your TV or projector.
3. Connect the **(ARC) to Sound 1** port of the VAX04101A to the HDMI eARC/ARC input on your soundbar.
4. Connect the provided power supply to the **DC 5V** port on the VAX04101A and then to a power outlet.
5. Ensure all devices are powered on.

Note: Use high-quality HDMI cables, especially for 4K HDR signals, to ensure optimal performance and prevent signal loss.

3.2 eARC Soundbar Compatibility

Transmits the internal TV sound to the Soundbar

If a TV with HDMI-ARC or eARC is connected to the TV output, the internal TV sound can also be played on the soundbar. The sound from cable TV, satellite TV and smart TV apps is thus played on the soundbar. Note that only sound formats can be played on the soundbar that are supported by the TV.

The VAX04101A is specifically designed to work with soundbars featuring an HDMI eARC connector. This allows for the transmission of advanced audio formats, including Dolby Atmos, directly from your sources to the soundbar, bypassing potential limitations of your TV.

4. OPERATING INSTRUCTIONS

4.1 Switching Input Sources

You can switch between connected HDMI sources using either the button on the device or the included infrared remote control.

- **Manual Switching:** Press the "Auto/Input" button on the front panel of the VAX04101A to cycle through the HDMI inputs (1, 2, 3). The corresponding LED will illuminate.
- **Remote Control Switching:** Use the "In1", "In2", "In3" buttons on the remote control to directly select the desired HDMI input. The "Auto Source" button can also be used for automatic switching.

- **Automatic Switching:** The switch can automatically switch to the last activated device if it powers off completely. Note that some streaming boxes may not fully power off, requiring manual selection.

4.2 Audio EDID Settings

The Audio-EDID settings determine the maximum audio format transmitted to your soundbar. This is crucial for ensuring your soundbar receives the highest quality audio it supports.

Connect up to 3 HDMI-Mediaplayers with your eARC-Soundbar

Perfect for Apple TV 4K, Xbox, Blu-ray-Player, Nintendo Switch
for an uncompressed audio experience

Image: The VAX04101A front panel showing Audio-EDID settings (Auto, 2.0, 5.1, 7.1) and indicators for 4K, HDR, and Dolby Vision support.

- **Auto:** The switch negotiates the audio format based on the capabilities of your TV or video projector. This may limit advanced formats if your TV does not support them.
- **2.0:** Forces stereo audio output.
- **5.1:** Forces 5.1 channel audio output. Select this if your soundbar supports 5.1 but not 7.1 or Dolby Atmos/DTS-X.
- **7.1:** Forces 7.1 channel audio output. Select this if your soundbar supports Dolby Atmos or DTS-X, as these formats are often transmitted within a 7.1 LPCM container.

Use the "Audio-EDID" buttons on the front panel or the remote control to select the appropriate setting. For optimal Dolby Atmos/DTS-X experience, select "7.1" if your soundbar supports it.

4.3 eARC Functionality

The eARC feature allows the sound from your TV's internal tuner or smart apps to be played through your connected soundbar.

Experience High-End in your Home Cinema

Supports Ultra-HD resolution up to 4K 60Hz
as well as 3D, HDR formats such as HLG-HDR, HDR10, HDR10+ und Dolby Vision

This HDMI eARC Pass Switch supports all popular high-end video and sound formats for an optimal home theater experience. Note that your TV must support the video formats and your sound system must also support the audio formats.

Image: A diagram illustrating how the VAX04101A transmits internal TV sound (from cable TV, satellite TV, or smart TV apps) to the soundbar via the ARC connection.

- To enable or disable eARC, press the "eARC on/off" button on the front panel or the "ARC" button on the remote control.
- When eARC is active, audio from your TV's internal sources will be routed to the soundbar.
- If your soundbar has additional HDMI inputs, you can connect sources directly to the soundbar and use the VAX04101A for other sources. In this scenario, ensure input 1 and eARC are selected on the switch.

Image: A comparison diagram showing the setup with eARC ON (up to 3 external sound sources with higher audio formats like Dolby Atmos) versus eARC OFF (playing from Apple TV input 1 without plugging).
