4. OPERATING AND INITIAL USE

After successful installation, follow these guidelines for the initial use and charging of your new battery.

4.1 First Use and Charging Cycles

1. **Initial Discharge:** Upon first use, allow the battery to discharge the factory-preloaded power completely until the phone turns off.
2. **First Charge:** Charge the phone for 6-8 hours. Avoid overcharging during this initial period to prevent damage to the battery cells.
3. **Activation Cycles:** For optimal performance, fully activate the battery by completing 3-4 full charge and discharge cycles. This helps the battery achieve its best use effect and maximum capacity.

4.2 Charging Recommendations

- Always use the original charger or a reliable, certified charger to charge the battery. Inferior chargers can negatively affect standby time and battery life.
- Avoid charging in extreme temperatures.

5. MAINTENANCE

Proper maintenance can significantly extend the lifespan and performance of your battery.

- **Clean Contacts:** If the battery's metal contacts become oxidized due to long-term use, it can lead to issues like automatic shutdowns or call disconnections. Regularly wipe the contacts clean before use.
- **Avoid Overcharging:** While modern batteries have protection circuits, consistent overcharging can still degrade battery health over time.
- **Temperature Management:** Extreme ambient temperatures (very low or very high) can significantly impact battery capacity and usage time. Avoid using or storing the phone in such conditions.
- **Long-Term Storage:** If storing the battery for an extended period, ensure it has some charge (around 50-60% is ideal) to prevent natural power loss and reduction in battery life. Store in a cool, dry place.

6. TROUBLESHOOTING

If you encounter issues with your new battery, consider the following common solutions:

- **Phone Shuts Down/Disconnects:** This can be caused by oxidized battery contacts. Try cleaning the metal contacts on both the battery and the phone.
- **Poor Battery Life:** Ensure you are using a reliable charger. Complete the recommended 3-4 full charge/discharge cycles to fully activate the battery. Avoid using the phone in extreme temperatures.
- **Battery Not Charging:** Verify that the charger and charging cable are functioning correctly. Ensure the battery connector is securely seated within the phone.
- **Installation Issues:** Double-check all connections made during installation. Refer back to instructional videos if necessary.

If problems persist after attempting these troubleshooting steps, please contact customer support for further assistance.
