7. TROUBLESHOOTING

If you encounter issues with your cabinet, refer to the following common solutions:

Problem	Possible Cause	Solution
Cabinet feels wobbly after assembly.	Loose fasteners or improper wall mounting.	Ensure all cam locks and screws are fully tightened. Verify wall mounting hardware is securely installed into a stud or appropriate anchor.
Doors are misaligned or do not close properly.	Hinges are not adjusted correctly.	Adjust the screws on the hinges to align the doors. Most hinges allow for vertical, horizontal, and depth adjustments.
Shelf does not sit level.	Shelf pins are not inserted evenly.	Remove the shelf and ensure all four shelf pins are fully and evenly inserted into the corresponding holes.
