- **Lens:** Captures video and images.
- **Power Button:** Turns the camera on/off.
- **Mode Switch:** Toggles between video, audio, and photo modes.
- **Indicator Light:** Displays camera status (e.g., recording, charging).
- **SD Card Slot:** For inserting the microSD card.
- **USB Port:** For charging and data transfer.
- **Reset Button:** Used to reset the device.
- **Magnetic Base & Clip Buckle:** For versatile mounting and attachment.

4. Setup

4.1 Initial Charging

Before first use, fully charge the camera. Connect the camera to a USB power source (e.g., computer, power adapter) using the provided USB cable. The indicator light will show charging status and turn off or change color when fully charged. A full charge typically takes approximately 3 hours and provides up to 14 hours of use.

4.2 Inserting the SD Card

Locate the SD card slot on the camera. Gently insert the provided microSD card into the slot until it clicks into place. Ensure the camera is powered off before inserting or removing the SD card. The camera will automatically power off after a few seconds if no SD card is detected upon startup.

4.3 Setting Date and Time

To ensure accurate timestamps on your recordings, connect the camera to your computer and follow the instructions in the camera's internal storage (usually a text file) to set the correct date and time.

5. Operating Instructions

5.1 Power On/Off

- **To Power On:** Press and hold the Power Button until the indicator light illuminates.
- **To Power Off:** Press and hold the Power Button until the indicator light turns off.

5.2 Recording Video

Slide the Mode Switch to the video recording position. The camera will typically start recording

automatically, indicated by a flashing light. Videos are saved in 10-minute segments. To stop recording, slide the Mode Switch to another position or power off the camera.

5.3 Taking Photos

While in video recording status, you can switch to photo mode to capture still images. Refer to the specific button functions on your device for photo capture (e.g., a short press of the power button or a dedicated photo button).

5.4 Recording Audio

Slide the Mode Switch to the audio recording position. The camera will begin recording audio, typically saving files hourly. The indicator light will confirm audio recording status.

5.5 Night Vision

The camera features manual night vision. To activate or deactivate night vision, locate the dedicated night vision switch or button on the device. Night vision provides clearer video and images in low-light conditions.

5.6 Motion Detection

The camera supports motion detection recording. When enabled, the camera will automatically start recording when motion is detected and stop when motion ceases, conserving storage space and battery life. Refer to the camera's settings (accessible via computer) to enable and configure motion detection.

5.7 Loop Recording

The camera supports loop recording. When enabled, new files will automatically overwrite the oldest files when the SD card is full. If loop recording is disabled, you must manually delete old files to free up space, otherwise, the camera will stop recording when the memory is full.

6. File Management

To view your recorded files, you have two options:

- **Connect via USB:** Connect the camera to your computer using the USB cable. The camera will appear as a removable disk, allowing you to access and transfer files.
- **Use an SD Card Reader:** Remove the microSD card from the camera and insert it into an SD card reader connected to your computer.

7. Troubleshooting

- **Camera not turning on:** Ensure the camera is fully charged. If the issue persists, try resetting the camera using a small pin in the reset hole.
- **Camera turns off automatically:** Check if an SD card is properly inserted. The camera requires an SD card to operate.
- **Cannot record:** Verify that the SD card has sufficient free space. If loop recording is off and the card is full, delete old files or replace the card. Ensure the SD card is formatted correctly (FAT32 recommended).
- **Poor video/audio quality:** Ensure the lens is clean. For night vision, confirm it is activated in low-light conditions.
- **Date/Time incorrect:** Reconnect to a computer and follow the instructions to set the date and time file.
