3. Installation (Setup)

Follow these steps to correctly install your new air filter:

1. **Power Off:** Ensure the dehumidifier is unplugged from the power outlet before beginning any installation or maintenance.
2. **Locate Filter Compartment:** Refer to your dehumidifier's original user manual to locate the air filter compartment. This is typically at the back or side of the unit.
3. **Remove Old Filter:** Carefully open the filter compartment cover and remove the old, dirty filter. Note its orientation for correct placement of the new filter.
4. **Insert New Filter:** Place the new De'Longhi replacement air filter into the compartment, ensuring it fits securely and is oriented correctly.
5. **Close Compartment:** Close the filter compartment cover firmly.
6. **Restore Power:** Plug the dehumidifier back into the power outlet.

Proper installation ensures optimal air filtration and dehumidifier performance.

4. Usage (Operating)

Once installed, the air filter operates automatically as part of your dehumidifier's normal function. It is designed to capture dust, pollen, and other airborne particles, contributing to improved air quality in your environment while the dehumidifier reduces humidity levels.
No specific user interaction is required for the filter during operation, beyond regular maintenance.

5. Maintenance

Regular cleaning of the air filter is crucial for maintaining the efficiency and longevity of your dehumidifier. A clogged filter can reduce airflow, decrease dehumidification efficiency, and potentially lead to increased energy consumption.

Cleaning the Air Filter:

1. **Power Off:** Always unplug the dehumidifier before cleaning.
2. **Remove Filter:** Open the filter compartment and carefully remove the air filter.
3. **Clean:** Use a vacuum cleaner with a brush attachment to gently remove dust and debris from the filter surface. For more stubborn dirt, the filter can be rinsed under lukewarm running water.
4. **Dry:** If washed, ensure the filter is completely dry before reinserting it into the dehumidifier. Do not use direct heat to dry the filter.
5. **Reinstall:** Place the clean, dry filter back into its compartment and close the cover.

It is recommended to clean the air filter every two weeks or more frequently depending on the operating environment and usage. Replace the filter if it shows signs of damage or excessive wear that cannot be cleaned.

6. Troubleshooting

If your dehumidifier is not performing as expected after filter installation or maintenance, consider the following:

- **Reduced Airflow:** Check if the filter is clean and properly seated. A dirty or improperly installed filter can restrict airflow.
- **Decreased Dehumidification:** Ensure the filter is not clogged. A clean filter allows for optimal air circulation and moisture removal.
- **Unusual Noises:** Verify that the filter is securely in place and not vibrating against the unit's housing.
- **Filter Not Fitting:** Double-check your dehumidifier's model number against the compatibility list. This filter is not compatible with WFA models.

For issues beyond filter-related concerns, please consult your dehumidifier's main user manual or contact De'Longhi customer support.
