Picture Hang Solutions 100 lbs Mirror Hanging Kit

Model: B09BQ7GVRZ

INTRODUCTION

This instruction manual provides detailed guidance for the safe and effective installation of your Picture Hang Solutions Mirror Hanging Kit. This kit is designed for securely mounting mirrors and heavy frames, offering robust support and adjustable leveling features.

- **Complete Hanging Solution:** Includes large strap hangers and adjustable leveling hardware for various mirror types.
- **High Weight Capacity:** Supports up to 100 pounds when using a pair of large strap hangers with a pair of adjustable J-Hooks, suitable for drywall or wood applications.
- **Adjustable for Precision:** Adjustable J-Hooks provide 3/4" adjustment capacity, simplifying leveling during installation.
- **Durable Construction:** Hangers are designed for heavy-duty applications, ensuring secure and reliable mounting.
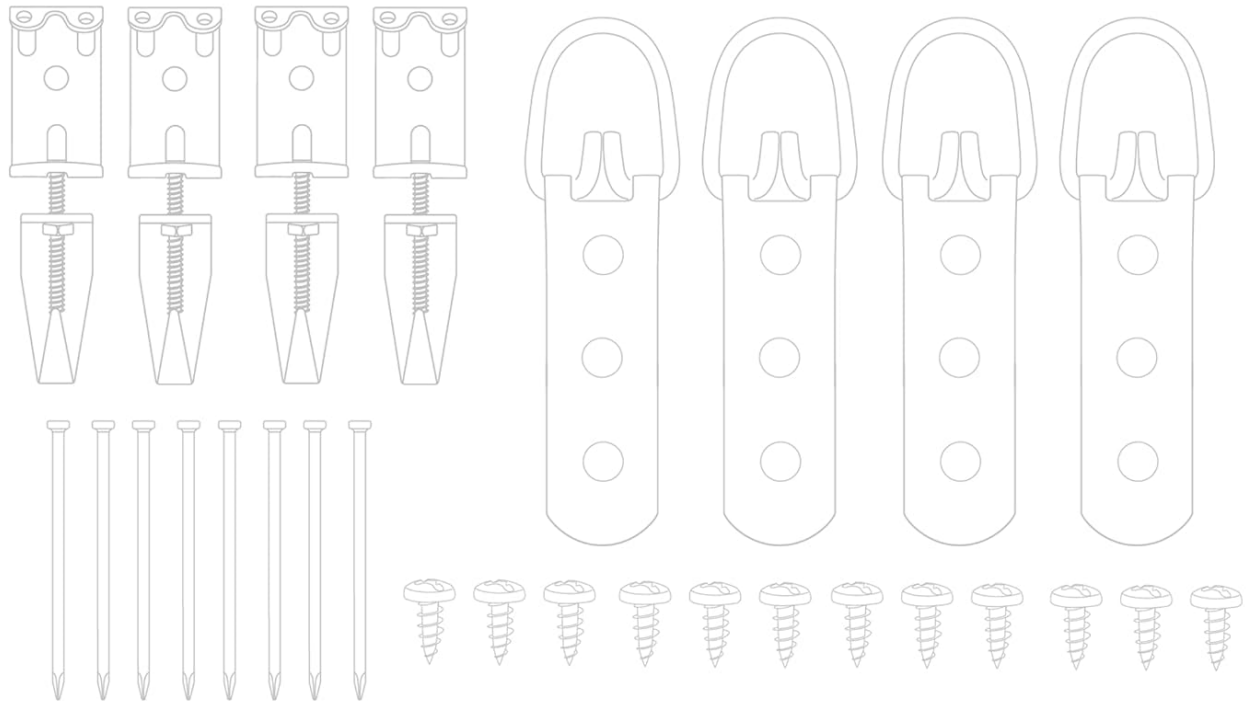

PACKAGE CONTENTS

Verify that all components are present before beginning installation. Each kit includes:

- (4) Large Strap Hangers
- (4) Adjustable J-Hooks
- (12) #6 x 1/2" Screws
- (8) Nails

PACK INCLUDES:

2 MIRROR HANGING KITS

One kit includes (4) Large Strap Hangers for each mirror, (4) Adjustable J-Hooks for each mirror, (12) #6 x 1/ 2" Screws and (8) Nails

SETUP AND INSTALLATION

Before installation, ensure your wall type is suitable. This kit is best suited for drywall or wood panel walls. Select a hanger with a weight capacity of at least 1-3 times the weight of the item you are hanging. This kit supports up to 100 lbs.

Step 1: Attach Strap Hangers to Mirror

Position the large strap hangers on the back of the mirror frame. Secure them using the provided #6 x 1/2" screws. Ensure they are firmly attached and spaced appropriately for the mirror's size and weight distribution.

Step 1
Attach the large strap hangers to the back of the mirror.

Step 2
Install the Adjustable J-Hooks on the wall. Make sure to align the hooks with the strap hangers.

Step 3
Hang the strap hangers on the J Hooks and adjust as needed.

Figure 2: Attaching strap hangers to the mirror frame.

Step 2: Install Adjustable J-Hooks on Wall

Mark the desired location for your mirror on the wall. Install the adjustable J-Hooks onto the wall using the provided nails. For drywall, ensure the nails penetrate securely. For wood, pre-drilling a small pilot hole may be beneficial. Make sure to align the J-Hooks horizontally so they will properly engage with the strap hangers on the mirror.

Complete Hanging Kit For Mirrors

Includes heavy duty strap hangers and adjustable J-Hooks for a secure installation.

Figure 3: Installing adjustable J-Hooks on the wall.

Step 3: Hang and Adjust Mirror

Carefully lift the mirror and engage the strap hangers with the J-Hooks on the wall. Once hung, use the adjustment mechanism on the J-Hooks to fine-tune the mirror's level. The J-Hooks offer 3/4" of adjustment capacity, allowing for precise leveling without needing perfect initial wall installation.

Operation and Usage Tips

Once installed, the mirror hanging kit provides a stable and secure mount. Periodically check the stability of the mirror and the tightness of the screws, especially after any significant vibrations or impacts to the wall.

- **Weight Distribution:** For very wide mirrors, consider using more than two sets of hangers to distribute the weight evenly.
- **Wall Anchors:** For maximum security, especially with heavier items or in less robust drywall, consider using appropriate wall anchors in conjunction with the provided nails for the J-Hooks.
- **Avoid Picture Wire:** Do not use picture hanging wire with this system for heavy mirrors, as it can concentrate stress and lead to failure.

Maintenance

The Picture Hang Solutions Mirror Hanging Kit requires minimal maintenance. Regularly inspect the hangers and wall mounts for any signs of wear, corrosion, or loosening. Tighten screws as necessary. Keep the components clean and dry to prevent rust.

TROUBLESHOOTING

- **Mirror is not level:** Use the 3/4" adjustment capacity of the J-Hooks to fine-tune the level. Turn the screw on the J-Hook to raise or lower that side of the mirror.

- **Mirror feels unstable:** Ensure all screws are tightly secured to both the mirror frame and the wall. Verify that the J-Hooks are properly engaged with the strap hangers. If hanging on drywall, consider using stronger wall anchors if the weight is near the maximum capacity or if the drywall feels weak.

- **Difficulty attaching J-Hooks to wall:** For wood, ensure a pilot hole is drilled. For drywall, ensure the nails are driven straight and fully into the wall.

SPECIFICATIONS

Feature	Detail
Model Number	B09BQ7GVRZ
Brand	Picture Hang Solutions
Weight Capacity	Up to 100 lbs
Material	Alloy Steel
Fastener Type	Hook
Surface Recommendation	Drywall, Wood
Adjustable J-Hook Capacity	3/4 inch
Item Weight (Kit)	5.3 ounces (0.15 Kilograms)
Color	Silver
