## MAINTENANCE

---

Regular cleaning of your filter is essential to maintain optimal suction power and filtration efficiency.

- Cleaning Frequency:** It is recommended to wash the filter at least once a month, or more frequently if you use your vacuum heavily or notice a decrease in suction.
- Washing the Filter:**
  - Remove the filter from the vacuum as described in the 'Setup and Installation' section.
  - Hold the filter under cold running water, ensuring water flows through both the pleated paper and the open end.
  - Gently squeeze and twist the filter to remove dirt and debris. Continue washing until the water runs clear.
  - Do not use detergents or hot water, as this can damage the filter material.
- Drying the Filter:**
  - Shake off excess water.
  - Place the filter upright in a warm place to dry completely for at least 24 hours. Ensure it is absolutely dry before re-

installing.

- Do not dry in a tumble dryer, microwave, or near an open flame.

4. **Replacement:** Filters have a finite lifespan. If, after thorough cleaning, you still experience reduced performance or the filter appears damaged, it is time to replace it with a new WSRYFDC 970422-01 filter.
