4. OPERATING INSTRUCTIONS

Charging Your Device:

To charge your Verizon Kyocera phone, connect the USB cord as described in Section 3 to a suitable USB power adapter (e.g., wall charger, car charger). The charging indicator on your phone will typically illuminate or display a charging icon.

- Ensure the power source provides the correct voltage and current for your device.
- Avoid using damaged cables or chargers, as this can harm your device or pose a safety risk.

Data Transfer:

To transfer data between your Verizon Kyocera phone and a computer, connect the USB cord as described in Section 3 to a computer's USB port. Your phone may prompt you to select a connection mode (e.g., "File Transfer," "MTP," "PTP," or "Charging Only"). Select the appropriate mode for data transfer.

- Follow your computer's operating system instructions for accessing files on a connected device.
- Safely eject or disconnect your device from the computer before physically removing the cable to prevent data corruption.

5. MAINTENANCE AND CARE

- **Storage:** Store the cable in a cool, dry place away from direct sunlight and extreme temperatures. Avoid tightly coiling or bending the cable at sharp angles, which can damage internal wires.
- **Cleaning:** If the cable becomes dirty, gently wipe it with a soft, dry, lint-free cloth. Do not use harsh chemicals or abrasive cleaners. Ensure connectors are free of dust and debris.
- **Handling:** Always grasp the connector ends when plugging or unplugging the cable. Avoid pulling on the cable itself, as this can strain the connections and lead to damage.

- **Inspection:** Periodically inspect the cable for any signs of wear, fraying, cuts, or exposed wires. Discontinue use immediately if any damage is observed.

6. TROUBLESHOOTING

Common Issues and Solutions:

- **Device Not Charging:**
 - Ensure both ends of the cable are securely connected.
 - Try a different USB power adapter or USB port.
 - Check the charging port on your phone for debris or damage.
 - Verify the power source is active.
- **Device Not Connecting for Data Transfer:**
 - Ensure the cable is connected to a computer's data-enabled USB port.
 - On your phone, check the USB connection settings and select "File Transfer" or "MTP" mode.
 - Try a different USB port on your computer.
 - Restart both your phone and computer.
- **Cable Appears Damaged:**

If the cable shows any signs of physical damage (fraying, cuts, exposed wires), discontinue use immediately and replace it to prevent potential hazards or damage to your device.
