8. TROUBLESHOOTING

If you experience issues after installing the new timer, consider the following common troubleshooting steps:

- **Timer Not Functioning:**
 - Check all wire connections to ensure they are secure and correctly matched according to your diagram.
 - Verify that the microwave oven is receiving power.
 - Ensure the timer knob (if applicable) is properly seated and engaging the timer shaft.
- **Timer Not Counting Down or Stopping:**
 - This could indicate an internal fault with the timer or an issue with the microwave's control board.
 - Re-check connections.
- **No Power to Microwave:**
 - Ensure the microwave is plugged in and the circuit breaker has not tripped.

- Verify that all internal safety switches (e.g., door interlock switches) are functioning correctly.
