TROUBLESHOOTING

Pacs Not Dissolving Completely:

- Ensure pacs are placed directly into the empty drum before adding clothes.
- Avoid overloading the washing machine, as this can prevent proper water circulation and pac dissolution.
- Verify that the water temperature is appropriate for the wash cycle; while these pacs dissolve in cold water, extremely cold conditions or very short cycles might affect dissolution.

Clothes Not Clean:

- Check the dosage guidelines and use the appropriate number of pacs for your load size.
- Avoid overloading the washing machine to allow clothes to move freely and detergent to distribute effectively.
- For heavily soiled items, consider using a pre-treatment or a heavier wash cycle.
