### Microsoft 8XA-00001

# Microsoft Surface Pro Signature Keyboard User Manual

Model: 8XA-00001 (Black)

## INTRODUCTION

This manual provides instructions for the Microsoft Surface Pro Signature Keyboard, designed for use with Surface Pro 8 and Surface Pro X devices. This keyboard offers a full mechanical keyset, backlit keys, a large glass trackpad, and integrated storage and charging for the Surface Slim Pen 2 (sold separately). Its design allows for versatile use, functioning as a traditional keyboard, a protective cover, and a stable base for your Surface device.

## SETUP

- Attaching the Keyboard:** Align the magnetic connector on the keyboard with the corresponding port on your Surface Pro 8 or Surface Pro X. The keyboard will click into place and securely attach. No separate power connection is required for the keyboard as it draws power directly from the Surface device.
- Initial Recognition:** Upon first attachment, your Surface device should automatically recognize the keyboard. If prompted, follow any on-screen instructions to complete the setup.
- Pen Storage and Charging:** The keyboard features a dedicated storage bay for the Surface Slim Pen 2 (sold separately). Insert the pen into this bay to store it securely and ensure it remains charged.

## OPERATING INSTRUCTIONS

---

### Typing and Trackpad Use

The Surface Pro Signature Keyboard provides a full mechanical keyset for a responsive typing experience. The large glass trackpad allows for precise navigation and multi-touch gestures within the Windows operating system.

### Backlit Keys

The keyboard features backlit keys for improved visibility in low-light conditions. The backlight intensity can typically be adjusted using dedicated function keys (e.g., F1 or F2, depending on your Surface model and software configuration).

## Function Keys

Dedicated function keys (F1-F12) provide quick access to system controls such as screen brightness, volume adjustment, and media playback. Refer to your Surface device's documentation for specific function key assignments.

## Versatile Positioning

- **Laptop Mode:** Attach the keyboard and use the Surface Pro's integrated kickstand to position the screen for a traditional laptop experience.
- **Tablet Mode:** Fold the keyboard completely back behind the screen to use your Surface Pro as a tablet. The keyboard automatically deactivates in this position.
- **Protective Cover:** Close the keyboard over the screen to protect it from scratches and conserve battery life when not in use.

## MAINTENANCE

- **Cleaning the Alcantara Material:** The keyboard's Alcantara covering can attract dust and debris. To clean, gently wipe the surface with a soft, lint-free cloth dampened with water. For stubborn spots, a mild soap solution

can be used sparingly, followed by wiping with a clean, damp cloth. Avoid harsh chemicals or abrasive materials.

- **Cleaning Keys and Trackpad:** Use a soft, dry cloth to wipe the keys and trackpad. For dust or debris between keys, a can of compressed air can be used.
- **General Care:** Avoid exposing the keyboard to excessive moisture, extreme temperatures, or direct sunlight. Do not attempt to disassemble the keyboard.

## TROUBLESHOOTING

---

- **Keyboard Not Responding:**

- Ensure the keyboard is securely attached to your Surface Pro. Detach and reattach it to confirm the connection.
- Restart your Surface Pro device.
- Check for any pending Windows updates that might affect peripheral functionality.
- If the issue persists, try connecting the keyboard to another compatible Surface Pro device to determine if the issue is with the keyboard or the Surface device.

- **Backlight Not Working:**

- Verify that the backlight function keys are being pressed correctly.
- Check your Surface Pro's display settings or keyboard settings within Windows to ensure the backlight is enabled and adjusted.

- **Trackpad Issues:**

- Ensure the trackpad surface is clean and free of debris.
- Check trackpad settings in Windows for sensitivity or gesture configurations.
- If the trackpad is unresponsive, detach and reattach the keyboard.

- **Difficulty Removing Surface Slim Pen 2:**

- The pen is held securely by magnets. Apply firm, steady pressure when pulling the pen from its storage bay. Avoid twisting or prying.
