- **Avoid Overloading:** Do not place excessive weight on the bed or hang heavy items from the frame.

7. TROUBLESHOOTING

If you encounter any issues with your DORTALA Loft Bed, refer to the common solutions below.

- **Bed is Wobbly or Shaky:**
 - Ensure all assembly bolts and screws are fully tightened. Do not overtighten, but ensure they are snug.
 - Verify the bed is placed on a level surface. Use shims if necessary to stabilize.
 - Check that all components are correctly aligned according to the assembly instructions.
- **Creaking Noises:**
 - Tighten all fasteners. Loose connections are a common cause of creaking.
 - Inspect bed slats for proper seating and ensure they are not damaged or warped. Replace any damaged slats.
 - Apply a small amount of paraffin wax or silicone spray to joints where wood meets wood, if tightening does not resolve the issue.
- **Parts Do Not Fit Together:**
 - Double-check the orientation of the parts. Some pieces may look similar but have specific alignments.
 - Ensure you are using the correct hardware for each step as indicated in the assembly manual.
 - If a part appears warped or defective, do not force it. Contact customer support for a replacement.
