2. Safety Information

To ensure safe operation, always adhere to the following safety precautions:

- **Electrical Safety:** Ensure the power supply matches the voltage specified on the appliance's rating label. Do not use extension cords or multiple socket adapters. Always plug the freezer into a grounded outlet.
- **Ventilation:** Maintain adequate space around the freezer for proper air circulation. Blocked vents can lead to overheating and reduced efficiency.
- **Flammable Materials:** Do not store explosive substances or flammable materials inside or near the freezer.
- **Children:** This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
- **Defrosting:** Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.
- **Maintenance:** Unplug the freezer before cleaning or performing any maintenance.

4. Setup

Follow these steps for proper installation of your freezer:

1. **Unpacking:** Carefully remove all packaging materials, including protective films and tapes. Keep

packaging out of reach of children.

2. **Placement:** Choose a dry, well-ventilated location away from direct sunlight, heat sources (e.g., oven, radiator), and extreme cold. Ensure there is at least 10 cm of space around the back and sides for adequate air circulation.
3. **Levelling:** Use the adjustable levelling feet at the bottom of the freezer to ensure it stands firmly and level on the floor. A level appliance operates more efficiently and quietly.
4. **Cleaning:** Before first use, clean the interior and exterior of the freezer with a damp cloth and mild detergent. Wipe dry thoroughly.
5. **Initial Wait Time:** After placing the freezer in its final position, wait for at least 2-4 hours before plugging it into the power outlet. This allows the refrigerant to settle.
6. **Power Connection:** Plug the freezer into a dedicated, grounded electrical outlet.

5. Operating Instructions

Once the freezer is set up, follow these guidelines for operation:

- **Temperature Setting:** Locate the temperature control dial (refer to Figure 5). Turn the dial to your desired setting. A colder setting is typically indicated by a higher number or a 'Max' position. Allow several hours for the freezer to reach the set temperature before loading food.
- **Loading Food:** Do not overload the freezer. Ensure there is space for air to circulate around items. Avoid placing hot food directly into the freezer; allow it to cool down first.
- **Door Opening:** Minimize the frequency and duration of door openings to maintain a stable internal temperature and conserve energy.
- **Freezing Fresh Food:** For optimal freezing, place fresh food in the upper compartments or directly on the shelves (if applicable) to allow for faster freezing.

6. Maintenance

Regular maintenance ensures the longevity and efficiency of your freezer:

- **Cleaning:** Unplug the freezer before cleaning. Clean the interior regularly with a solution of mild detergent and warm water. Wipe down the exterior with a damp cloth. Do not use abrasive cleaners or sharp objects.
- **Defrosting:** Over time, frost will accumulate inside the freezer. When the frost layer becomes about 5mm thick, defrost the appliance. To defrost, unplug the freezer, remove all food, and leave the door open. Place towels at the bottom to absorb melting ice. Do not use sharp objects to remove ice. Once defrosted, clean and dry the interior thoroughly before plugging it back in.
- **Door Seal:** Regularly check the door seal for any damage or gaps. A damaged seal can lead to inefficient operation. Clean the door seal with a damp cloth.

- **Power Saving Tips:** Keep the freezer in a cool, well-ventilated area. Avoid frequent door openings. Ensure the door seal is intact. Defrost when necessary.

7. Troubleshooting

Before contacting customer service, try these simple troubleshooting steps:

Problem	Possible Cause	Solution
Freezer not cooling	No power; temperature setting too high; door not closed properly; excessive frost build-up.	Check power plug and outlet; adjust temperature setting; ensure door is fully closed; defrost the freezer.
Excessive noise	Freezer not level; objects touching the back of the unit; compressor noise (normal).	Adjust levelling feet; move objects away from the freezer; compressor noise is normal during operation.
Water on floor	Defrost water not properly drained; door left open.	Ensure drain plug (if applicable) is secure; close door properly.
