MaximalPower VF HON HRF-C2

MaximalPower HEPA Type C Replacement Filters

USER MANUAL

1. Introduction

This manual provides essential information for the proper use and maintenance of your MaximalPower HEPA Type C Replacement Filters. These filters are designed to enhance air quality by capturing various airborne particles.

3. Installation Instructions

Follow these steps to replace the air filter in your compatible air purifier:

1. Ensure the air purifier is turned off and unplugged from the power outlet.
2. Locate the filter compartment on your air purifier. Refer to your air purifier's specific user manual for exact instructions on opening the compartment.
3. Carefully remove the old, used filter. Dispose of it according to local regulations.
4. Unpack the new MaximalPower HEPA Type C Replacement Filter.
5. Insert the new filter into the compartment, ensuring it is seated correctly. For tower air purifiers, two filters may be required for proper operation.
6. Close the filter compartment securely.
7. Plug the air purifier back into the power outlet and turn it on.

Image 3: A close-up view of two replacement filters, highlighting the pleated HEPA material and the sturdy frame, ready for installation.

4. Operating Principles

These HEPA-Type filters are designed to capture airborne particles effectively. They work by trapping particles as small as 0.3 microns, including dust, dirt, grime, odors, and smoke, thereby improving the overall air quality in your environment. The filtration system aims to remove approximately 95% of these unwanted particles.

Image 4: An informational graphic detailing the benefits of the filters, such as improving air quality and capturing microscopic particles.

5. Maintenance

For optimal performance and to maintain a healthy living environment, it is recommended to replace the filters every 6 to 12 months. The actual replacement frequency may vary depending on usage, air quality in your area, and the operating environment (e.g., presence of pets, smokers, or high dust levels).

6. Troubleshooting

- **Reduced Airflow:** If you notice a decrease in airflow from your air purifier, the filter may be clogged. Inspect the filter and replace it if it appears dirty or heavily loaded with particles.
- **Persistent Odors:** If unpleasant odors persist despite regular use, the filter may be saturated. Consider replacing the filter more frequently, especially in environments with strong odors.
- **Unusual Noise:** Ensure the filter is correctly seated in its compartment. A loose filter can cause rattling or other unusual noises.

7. Specifications

Filter Type	Air Purifier Filter Type C (HEPA-Type)
-------------	--

Item Dimensions (each filter)	10 x 4.60 x 3 inches
Material	HEPA-Type filtration material
Weight (2-pack)	2 pounds
