6. TROUBLESHOOTING

If you encounter any issues with your bed frame, refer to the following common solutions:

Problem	Possible Cause	Solution
Squeaking or Noise	Loose connections, slats not properly seated.	Check and tighten all bolts and screws. Ensure wooden slats are firmly in place and the Velcro strips are engaged.
Mattress Sliding	Anti-slip features not engaged or worn.	Ensure the mattress is centered on the frame. If the anti-slip strips are worn, consider adding a non-slip mat between the mattress and slats.
Frame Instability	Uneven floor, loose connections, damaged components.	Verify the bed is on a level surface. Re-tighten all assembly hardware. Inspect for any damaged parts and contact support if necessary.
