6. Troubleshooting

This section addresses common issues you might encounter with your bed frame.

Problem	Possible Cause	Solution
Bed frame is squeaking or rattling.	Loose bolts or connections.	Inspect all bolts and screws. Tighten any loose fasteners. Ensure the frame is level on the floor.
Slats are falling out or shifting.	Improper installation or loose frame.	Ensure the frame is fully tightened and square. Re-seat the slats firmly into their designated slots. Verify mattress size compatibility.
Frame feels unstable or wobbly.	Uneven floor surface or loose connections.	Check that all legs are in contact with the ground. Re-tighten all assembly bolts. If the floor is uneven, consider using furniture pads or shims under the legs.
Mattress slides on the frame.	Incorrect mattress size or lack of friction.	Ensure your mattress is the correct size (75"L x 39"W for Twin). The frame is designed to embed the mattress, but if sliding persists, consider using a non-slip mattress pad.
