

Avalla S-95

Avalla S-95 Portable Air Conditioner User Manual

Model: S-95 | Brand: Avalla

1. INTRODUCTION

Thank you for choosing the Avalla S-95 Portable Air Conditioner. This 3-in-1 unit is designed to provide efficient cooling, dehumidification, and air circulation for your living spaces. With its powerful 7000 BTU cooling capacity, it can rapidly cool rooms up to 68m³. This manual provides essential information for the safe and effective operation, maintenance, and troubleshooting of your new appliance.

Control your climate all year round

3-in-1

Air conditioner

Creating comfort all summer long

Dehumidifier

Extracts 20L of water per day, protecting your home

Fan

Ensures consistent indoor circulation, keeping your air fresh

Figure 1.1: The Avalla S-95 unit showcasing its three primary functions: air conditioning, dehumidifying, and fan operation.

2. SAFETY INFORMATION

Please read all safety warnings and instructions carefully before using this appliance to prevent injury or damage. Keep this manual for future reference.

- Electrical Safety:** Ensure the power supply matches the rating on the appliance label. Do not operate with a damaged cord or plug. Do not share the power outlet with other appliances.
- Ventilation:** Always ensure proper ventilation when operating the unit in cooling mode by using the provided window vent kit. Do not block air inlets or outlets.
- Refrigerant:** This unit uses R-290 refrigerant, which is flammable. Do not puncture the refrigerant circuit. Only qualified personnel should service the unit.
- Placement:** Place the unit on a flat, stable surface. Maintain a minimum distance of 20cm from walls and other objects to ensure proper airflow.
- Children and Pets:** Keep children and pets away from the appliance during operation. This appliance is not

intended for use by persons with reduced physical, sensory or mental capabilities unless supervised.

- **Cleaning:** Always unplug the unit before cleaning or performing any maintenance.
- **Water Drainage:** Ensure the water tank is regularly drained, especially when using the dehumidifier function, to prevent overflow.

3. PRODUCT OVERVIEW

3.1 Components

The Avalla S-95 Portable Air Conditioner comes with the following main components:

- Portable Air Conditioner Unit (S-95)
- Exhaust Hose
- Window Vent Kit (includes window bracket and adapters)
- Remote Control
- Drain Hose (for continuous drainage)

Figure 3.1: All main components included with the Avalla S-95 Portable Air Conditioner.

3.2 Control Panel and Remote Control

The unit features an intuitive digital display and touch controls on the top panel, along with a full-function remote control for convenient operation.

Figure 3.2: Top-down view of the S-95 control panel, showing the digital display and various function buttons.

Key Controls:

- **Power Button:** Turns the unit on/off.
- **Mode Button:** Cycles through Cooling, Dehumidifier, and Fan modes.
- **Temperature Up/Down:** Adjusts the desired temperature in Cooling mode.
- **Fan Speed Button:** Selects between low and high fan speeds.
- **Timer Button:** Sets the 24-hour on/off timer.
- **Sleep Mode Button:** Activates sleep mode for quieter operation and gradual temperature adjustment.

4. SETUP

4.1 Unpacking

Carefully remove the unit and all accessories from the packaging. Retain the original packaging for future storage or transport.

4.2 Placement

Place the air conditioner on a firm, level surface in the room you wish to cool. Ensure there is at least 20cm of space around the unit for proper air circulation.

Figure 4.1: Proper placement of the S-95 unit in a room, demonstrating the exhaust hose connection to a window.

4.3 Window Vent Kit Installation

The window vent kit is essential for exhausting hot air outside when using the cooling mode.

1. Attach the exhaust hose adapter to one end of the exhaust hose.
2. Connect the other end of the exhaust hose to the exhaust outlet on the back of the air conditioner unit.
3. Assemble the window slider kit according to your window type (sliding, casement, or awning windows).
4. Insert the window exhaust adapter into the opening of the window slider kit.
5. Secure the window slider kit in your window opening, ensuring a tight seal to prevent hot air from re-entering the room.

5. OPERATING MODES

The Avalla S-95 offers three primary operating modes: Cooling, Dehumidifier, and Fan.

5.1 Cooling Mode

This mode provides powerful air conditioning to lower room temperature.

- Press the **Power** button to turn on the unit.
- Press the **Mode** button until the cooling icon (snowflake) is displayed.
- Use the **Temperature Up/Down** buttons to set your desired temperature (range: 16°C to 32°C).
- Adjust fan speed using the **Fan Speed** button (Low/High).

Powerful cooling performance

Quickly cool rooms up to 68m³

Large room

7000BTU
cool down to 16°C

Accelerated
290m³/h cooling

Figure 5.1: The S-95 unit effectively cooling a large room, demonstrating its powerful performance.

5.2 Dehumidifier Mode

This mode removes excess moisture from the air, ideal for damp environments or drying clothes.

- Press the **Power** button to turn on the unit.
- Press the **Mode** button until the dehumidifier icon is displayed.
- The unit will automatically remove up to 20 litres of moisture per day.
- For continuous drainage, connect the provided drain hose to the drainage port and direct it to a suitable receptacle.

Figure 5.2: The S-95 unit used in dehumidifier mode, effectively assisting in drying laundry.

5.3 Fan Mode

This mode circulates air without cooling or dehumidifying.

- Press the **Power** button to turn on the unit.
- Press the **Mode** button until the fan icon is displayed.
- Adjust fan speed using the **Fan Speed** button (Low/High).

5.4 Timer Function

Set the unit to automatically turn on or off within a 24-hour period.

- With the unit on or off, press the **Timer** button.
- Use the **Temperature Up/Down** buttons to set the desired hours (1-24).
- The timer will activate after the set time.

5.5 Sleep Mode

For quiet operation and comfortable sleep, activate Sleep Mode.

- While in Cooling mode, press the **Sleep Mode** button.
- The unit will operate at a lower fan speed and gradually increase the set temperature by 1°C per hour for the first two hours, then maintain that temperature.
- Operating noise level is approximately 52dB in this mode.

Figure 5.3: The S-95 unit operating quietly in a bedroom, ideal for undisturbed sleep.

6. MAINTENANCE

Regular maintenance ensures optimal performance and extends the lifespan of your Avalla S-95.

6.1 Cleaning the Air Filter

The S-95 is equipped with a washable air filter. Clean it every two weeks or more frequently depending on usage and air quality.

1. Unplug the air conditioner from the power outlet.
2. Locate the air filter panel (usually at the back or side of the unit).
3. Remove the filter.
4. Wash the filter under running water (warm, soapy water if very dirty).
5. Allow the filter to air dry completely before reinserting it into the unit.

6.2 Draining Water

The unit has an internal water tank that collects condensate. It will automatically shut off when full. For continuous operation, especially in dehumidifier mode, use the continuous drainage option.

- **Manual Drainage:** When the internal tank is full, the unit will stop operating and display an indicator. Place a shallow pan or tray under the drainage port (located at the bottom rear of the unit) and remove the drain plug to empty the water. Replace the plug securely.
- **Continuous Drainage:** Attach the provided drain hose to the continuous drainage port and direct the other end into a floor drain or a larger container. Ensure the hose is sloped downwards for proper gravity drainage.

6.3 Storage

Before storing the unit for an extended period:

1. Drain all water from the unit.
2. Clean the air filter.
3. Run the unit in fan-only mode for a few hours to dry the internal components.
4. Unplug the unit and coil the power cord neatly.
5. Store the unit in a cool, dry place, preferably in its original packaging.

7. TROUBLESHOOTING

Refer to this section for common issues and their solutions. If the problem persists, contact Avalla customer support.

Problem	Possible Cause	Solution
Unit does not turn on.	No power, power cord unplugged, circuit breaker tripped.	Check power connection, wall outlet, and circuit breaker.
Unit is not cooling effectively.	Window kit not properly sealed, air filter dirty, room too large, doors/windows open.	Ensure window kit is sealed, clean air filter, close doors/windows, consider room size.
Unit is noisy.	Unit not on a level surface, fan speed too high.	Place on a level surface, select lower fan speed or Sleep Mode.
Water leakage.	Drain plug loose, continuous drain hose kinked or blocked, internal tank full.	Check drain plug, ensure hose is clear and sloped, drain internal tank.
Remote control not working.	Batteries dead or incorrectly inserted, obstruction between remote and unit.	Replace batteries, ensure clear line of sight to the unit's receiver.

Domande frequenti sul condizionatore d'aria

Domanda - Perché la modalità deumidificatore non funziona sul mio condizionatore d'aria Avalla?

Reposta - Quando si utilizza il condizionatore d'aria Avalla in modalità deumidificatore, è essenziale che la temperatura ambiente sia inferiore di 10°C rispetto alla temperatura dell'aria e di 5°C in confronto per raccogliere l'umidità raccolta. Inoltre, per un corretto funzionamento, la temperatura ambiente deve essere mantenuta ad al massimo di 10°C. Se la temperatura ambiente è superiore a 10°C, il dispositivo di controllo della modalità deumidificazione non si attiverà per evitare che il compressore entrerà in modalità di raffreddamento a modo eccessivo, prenseando le sue prestazioni ottimali.

Domanda - I condizionatori Avalla di quale hanno la modalità?

Reposta - Le unità S-50, S-80, S-150, S-220, S-360, S-550 e S-770 sono tutte dotate di una modalità "fase secca" con un'apposita programmazione per ridurre l'umidità sorgente durante il funzionamento continuo, offrendo un'esperienza di comfort più piacevole e tranquilla.

Domanda - Perché la mia condizionatrice perde acqua?

Reposta - Poiché l'unità raccoglie acqua durante il suo funzionamento, solitamente viene rilasciata dalla parte della stessa. Comunque, se il dispositivo non è in grado di gestire questa funzione, è necessario contattare il servizio clienti Avalla. Perché il condizionatore non è in grado di raccogliere l'acqua? Questo design strutturale migliora l'efficienza dell'aria circolante e sicuramente la tua unità ha la stessa. In tal caso, consigliamo di utilizzare un tubo di drenaggio invece di un percorso scorsoio per fornire un flusso continuo d'acqua e prevenire future perdite.

lang:fr score:18 filesize: 75.24 K page_count: 2 document date: 2023-10-03

Question - Why does the dehumidifier not work on my Air-Conditioner?

Answer - When utilizing your Avalla Air Conditioner in dehumidify mode, it is essential to ensure that the condensate drain hose is securely attached to the drain pan on the unit and directed into a suitable receptacle. During dehumidification, the proper functioning of the unit depends on the ambient temperature being maintained above 16°C. Should the displayed temperature fall below this threshold, the unit will automatically switch to a lower power setting to prevent the compressor from entering defrost mode excessively, preserving its optimal performance.

Question - Do Avalla Air Conditioners have a sleep mode?

Answer - The S-50, S-80, S-100, S-200, S-290, S-550, and S-770 units are all equipped with a sleep mode feature, specifically designed to reduce sound output during nighttime hours. This strategic design enhances the unit's efficiency by effectively circulating air throughout the room, resulting in a faster and more efficient cooling of the entire area.

Question - Why is my air conditioner leaking?

Answer - Our air conditioners have been thoughtfully engineered to optimize the airflow within the room. As a dehumidifier design feature, the direction of the air is intentionally not facing straight forward. This strategic design enhances the unit's efficiency by effectively circulating air throughout the room, resulting in a faster and more efficient cooling of the entire area.

Question - Is the exhaust hose compulsory?

Answer - As the unit collects water during its operation, it is typically expelled through the exhaust hose in small quantities. However, during the warmer months with increased humidity, the dehumidifier tends to extract more moisture from the air. Since the air conditioner is not in dehumidify mode, the water tank may not register as full, leading to potential overflow and damage.

In such instances, we highly recommend utilizing the continuous drainage hose in conjunction with a small bucket to facilitate a continuous flow of water and prevent any future leaks.

Question - Is the exhaust hose compulsory?

Answer - All our air conditioners are provided with a compact seal window kit, comprising an exhaust hose, a drain hose, a drain pan, a connection, and the necessary components for installation. It is important to note that we do not offer any alternative kits, and using the provided kit is mandatory while the unit is in operation.
