## TROUBLESHOOTING

---

If you experience issues with your heated blanket, refer to the following common solutions:

- **Blanket Not Heating:**
  - Ensure the power cord is securely plugged into a working electrical outlet.
  - Verify that the controller cord is firmly connected to the blanket.
  - Check if the auto-shutoff feature has activated (after 10 hours). Turn the blanket off and then on again.
  - Confirm the heat setting is not on '0' or 'Off'.
- **Controller Displaying an Error Code (e.g., 'F1'):**

- An error code often indicates a connection issue or an internal fault.
  - Unplug the blanket from the wall outlet and disconnect the controller from the blanket.
  - Wait for 5 minutes, then reconnect the controller to the blanket and plug the power cord back into the wall outlet.
  - If the error persists, the blanket or controller may require service.
- **Uneven Heating:**
    - Ensure the blanket is spread flat on the bed without any folds, bunches, or objects on top that could trap heat.
    - For dual control blankets, verify both controllers are set to the desired heat level.

If these steps do not resolve the issue, please refer to the Warranty and Support section for further assistance.
