SETUP AND INSTALLATION

This kit is designed for easy installation. For detailed step-by-step instructions with graphics, please refer to the included printed manual or contact our online service for a soft copy and professional guidance.

Key Installation Steps:

1. **Prepare the Door and Wall:** Ensure your door is between 30 to 33 inches wide and 1-3/8 to 1-3/4 inches thick. The wall above the door frame must be sturdy enough to support the track and door weight (up to 220 lbs).
2. **Fix Track to Wall:** Securely mount the track rail to the wall using the provided spacers and hardware. Ensure the track is level and properly aligned.
3. **Install Hangers on Door:** Attach the roller hangers to the top edge of your barn door.
4. **Install Door Stops:** Place the door stops at the desired positions on the track to prevent the door from sliding too far in either direction.
5. **Install Floor Guide:** Mount the floor guide to the floor directly beneath the door's path to prevent the bottom of the door from swinging.
6. **Hang the Door:** Carefully lift and place the door rollers onto the track.

Step 1: Fix track to wall.

Step 2: Install hangers.

Step 3: Install door stopper.

Step 4: Install floor guide.

Step 5: Installation completed.

OPERATING INSTRUCTIONS

The EaseLife barn door hardware is designed for smooth and quiet operation. The ball-bearing rollers ensure the door glides effortlessly along the track.

- To open the door, gently push it along the track until it reaches the desired open position or the door stop.
- To close the door, gently pull it along the track until it fully covers the opening or reaches the other door stop.

- Avoid forcing the door or applying excessive pressure, as this can cause unnecessary wear on the rollers and track.

MAINTENANCE

Regular maintenance will ensure the longevity and optimal performance of your barn door hardware:

- **Cleaning:** Wipe the track and rollers periodically with a soft, damp cloth to remove dust and debris. Avoid abrasive cleaners that could damage the black powder-coated finish.
- **Lubrication:** Apply a silicone-based lubricant to the roller bearings and the top of the track every 6-12 months, or as needed, to maintain smooth gliding.
- **Hardware Check:** Periodically inspect all screws, bolts, and fasteners to ensure they are tight. Re-tighten any loose hardware to prevent sagging or instability.
- **Door Stops and Floor Guide:** Verify that the door stops are securely in place and the floor guide is functioning correctly to prevent excessive door movement.

TROUBLESHOOTING

If you encounter any issues with your barn door hardware, refer to the following common solutions:

Problem	Possible Cause	Solution
Door is difficult to slide or makes noise.	Dust/debris on track, dry rollers, loose track.	Clean the track, lubricate rollers, check and tighten track mounting screws.
Door swings out from the wall.	Floor guide is loose or improperly installed.	Ensure the floor guide is securely fastened and correctly positioned to engage the bottom of the door.
Door jumps off the track.	Anti-jump discs not installed or improperly adjusted.	Verify that the anti-jump discs are installed on top of the door and adjusted to prevent the rollers from lifting off the track.

Safe and reliable

- 01 Anti-jump
- 02 Anti -swinging
- 03 Anti- falling
