## 7. TROUBLESHOOTING

---

If you encounter any issues with your Maenizi bed frame, refer to the common problems and solutions below:

- **Squeaking Noise:**
  - Ensure all bolts and screws are securely tightened. Loose connections are the most common cause of squeaking.
  - Verify that the mattress is properly seated on the slats and not rubbing against the frame.
  - Check if the floor protectors are intact and properly positioned to prevent direct metal-to-floor contact.
- **Mattress Sliding:**
  - While the frame is designed to minimize sliding, some mattresses may still shift. Consider using a non-slip mattress pad or grippers between the mattress and the slats.
- **Frame Wobbles/Unstable:**
  - Confirm that the bed frame is assembled on a flat, level surface. Uneven flooring can cause instability.
  - Re-check all connections and ensure they are fully tightened.
  - Verify that all 9 legs are making firm contact with the floor.
- **Missing Parts/Damaged Components:**
  - If you discover missing or damaged parts upon unboxing, do not proceed with assembly. Contact Maenizi customer support immediately for assistance.
