RF EXPOSURE EVALUATION

FCC ID: 2AN18TURTLEBOX

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency(RF) Radiation as specified in §1.1307 b:

The tag of the SAR test includes thresholds at 100 MHz to 1 GHz, as not necessary, different types of devices, including new technologies, "P" type, and operating devices, will have different thresholds. The following table is for reference, and not a limit. For example, if a device has a limit of 1.6 G, it is not required to perform a SAR test at 1.6 G, but below reference.

- For a 1.6 G device, a limit of 1.0 G is acceptable.
- The limit is a maximum and not a minimum.
- The reference limit is 1.6 G, and the operating reference is 1.5 G, and for transmission frequency between 100 MHz and 1 GHz, "P" type, the calculation will ignore the reference limit.

Routine SAR evaluation refers to that specifically required by §21093, using measurements or computer simulation. When routine SAR evaluation is not required, portable handhelds with output power greater than the applicable limit are required to evaluate to qualify for FCC approval.
