## TROUBLESHOOTING

Problem	Possible Cause	Solution
Scale does not turn on.	Battery is depleted.	Charge the scale using the USB cable.
Inaccurate weight readings.	Scale not on a level surface; overloaded; internal error.	Ensure scale is on a flat, stable surface. Do not exceed maximum weight capacity (22 lbs/10 kg). Turn off and restart the scale.
Wireless charging not working.	Device not aligned; device not Qi-compatible; scale not charged.	Ensure the center of your device is aligned with the wireless charging area on the scale. Verify your device supports Qi wireless charging. Ensure the scale has sufficient battery charge. For lighter devices, a slight tap may be needed to activate charging.
Display is not visible with large items.	Large container or item obstructing view.	The scale is designed with a large weighing surface to minimize this, but for very large items, you may need to adjust placement or use the tare function with a smaller, empty container first.
