## 2. INSTALLATION

Installing the disposable dust bag is a straightforward process designed for user convenience and hygiene.

1. Open the lid of your robot vacuum's auto-empty dock.
2. Locate the dust bag compartment.
3. Align the new dust bag with the slot in the compartment. The bag features a push-pull handle design for easy insertion.
4. Gently push the dust bag into place until it is securely seated. Ensure the bag's opening is properly connected to the dock's suction port.
5. Close the lid of the auto-empty dock.

The design of the dust bag helps prevent dust leakage during installation and removal, keeping dirt contained within the bag.

## 3. OPERATION AND CAPACITY

Once installed, the dust bag functions automatically with your Roborock robot vacuum's auto-empty dock. The dock will transfer collected debris from the robot vacuum into the dust bag after each cleaning cycle or

as configured.

Each dust bag has a large capacity of 2.5 liters, designed to hold a significant amount of dust, crumbs, debris, and pet hair. This capacity allows for extended periods of use before replacement is necessary, typically up to 7 weeks depending on usage and household conditions.

## 4. MAINTENANCE AND REPLACEMENT

Regular replacement of the dust bag is crucial for maintaining the optimal performance and suction efficiency of your robot vacuum cleaner and auto-empty dock. It is recommended to replace the dust bag every 1-2 months, or when the dock indicates that the bag is full.

### Replacement Procedure:

1. Open the lid of the auto-empty dock.
2. Grasp the push-pull handle of the full dust bag.
3. Pull the bag upwards and out of the compartment. The design ensures the bag opening seals automatically upon removal, preventing dust from escaping.
4. Dispose of the full dust bag responsibly.
5. Install a new Roborock disposable dust bag as described in the "Installation" section.
6. Close the lid of the auto-empty dock.

## 6. TROUBLESHOOTING AND SUPPORT

If you encounter any issues with the dust bags or your Roborock robot vacuum cleaner, please consider the following:

- **Reduced Suction:** Ensure the dust bag is not full and is correctly installed. A full or improperly seated bag can restrict airflow.
- **Dust Leakage:** Verify that the dust bag is fully inserted and sealed within the auto-empty dock compartment. Check for any tears or damage to the bag.
- **Dock Not Emptying:** Confirm the dust bag is installed. If the issue persists, consult your robot vacuum's main instruction manual for dock-specific troubleshooting.

For further assistance or if you have any questions, please contact Roborock customer support. Refer to your robot vacuum's main manual or the official Roborock website for contact information.
