GEEKVAPE Aegis One Pod Cartridge

GeekVape Aegis One Pod Cartridge User Manual

Brand: GEEKVAPE | Model: Aegis One Pod Cartridge

1. PRODUCT OVERVIEW

The GeekVape Aegis One Pod Cartridges are designed exclusively for use with the GeekVape Aegis One and Aegis 1FC Pod Kits. These replacement cartridges feature a 2ml e-liquid capacity and come with integrated coils. They are available in two resistance options: 0.8 ohm (recommended for 12-16W) and 1.2 ohm. Cartridges are sold in packs of three.

2. SETUP

2.1 Installing the Cartridge

1. Ensure your GeekVape Aegis One or Aegis 1FC device is turned off.
2. Align the bottom of the new pod cartridge with the pod slot on your device.
3. Gently push the cartridge firmly into the device until it clicks securely into place.

2.2 Filling the Cartridge

The Aegis One Pod Cartridges feature a convenient top-filling design.

1. Remove the black mouthpiece from the top of the cartridge. This will reveal the filling port.

2. Insert the nozzle of your e-liquid bottle into the filling port.
3. Slowly fill the cartridge with your desired e-liquid, being careful not to overfill. Avoid pouring e-liquid into the central airflow tube.

4. Once filled, securely replace the mouthpiece onto the cartridge.

2.3 Priming the Coil

After filling a new cartridge, it is crucial to prime the coil to prevent dry hits and extend coil life.

- Allow the filled cartridge to stand upright for at least 5-10 minutes before use. This allows the e-liquid to fully saturate the coil's cotton.
- Take a few short, gentle puffs without activating the device (if possible) to help draw e-liquid into the coil.

3. OPERATING INSTRUCTIONS

Once the cartridge is installed and primed, your GeekVape Aegis One or Aegis 1FC device is ready for use. The cartridge itself does not have operational controls; its function is to hold e-liquid and vaporize it via the integrated coil when power is supplied by the device.

- Ensure the cartridge is securely seated in the device.
- Refer to your GeekVape Aegis One/1FC device manual for specific instructions on activating and using the device.
- Inhale gently through the mouthpiece to activate the device (if it has auto-draw) or press the fire button while inhaling.

4. MAINTENANCE

4.1 Cleaning the Cartridge

- Periodically remove the cartridge from the device.
- Wipe down the exterior of the cartridge and the inside of the device's pod slot with a clean, dry cloth or cotton swab to remove any condensation or e-liquid residue.
- Do not rinse the cartridge with water, as this can damage the integrated coil.

4.2 When to Replace the Cartridge

The integrated coil in the cartridge has a limited lifespan. You will know it's time to replace the cartridge when you experience:

- A noticeable decrease in vapor production.
- A burnt or unpleasant taste, even with sufficient e-liquid.
- Reduced flavor intensity.
- Frequent leaking (though some minor condensation is normal).

Typically, a cartridge lasts 1-2 weeks depending on usage and e-liquid type. Replace the entire cartridge with a new one when these signs appear.

4.3 Storage

- Store unused cartridges in a cool, dry place away from direct sunlight and extreme temperatures.
- Keep cartridges out of reach of children and pets.

5. TROUBLESHOOTING

Problem	Possible Cause	Solution
Leaking	Overfilling, improper mouthpiece seal, worn-out coil, thin e-liquid.	Do not overfill. Ensure mouthpiece is securely attached. Replace cartridge if coil is old. Use e-liquid with appropriate VG/PG ratio.

Problem	Possible Cause	Solution
Burnt Taste / Dry Hits	Coil not primed, e-liquid level too low, coil lifespan ended.	Ensure coil is fully saturated before first use. Refill e-liquid promptly. Replace cartridge.
No Vapor Production	Cartridge not properly installed, device issue, coil short.	Re-seat the cartridge firmly. Clean device contacts. If problem persists, replace cartridge. Consult device manual.
Weak Flavor / Vapor	Coil nearing end of life, low e-liquid, low device battery.	Replace cartridge. Refill e-liquid. Charge device battery.
