

## Makartt Solid Nail Glue Gel

# Makartt Solid Nail Glue Gel (A-Clear, 15ML) Instruction Manual

## 1. INTRODUCTION

The Makartt Solid Nail Glue Gel is a versatile product designed for various nail art applications. This 15ML UV light-cured gel is formulated for strong adhesion and ease of use, suitable for both home and salon environments. It is presented in a solid, non-flowing state, which allows for precise application and repositioning before curing.

Key features include:

- **Multi-functional Use:** Functions as an adhesive for acrylic nails, fake nail tips, or soft gel nail tips.
- **Rhinestone Application:** Can be used to secure glitter diamonds and other nail decorations.
- **3D Nail Art:** Suitable for creating carved nail designs.
- **Long-Lasting Adhesion:** Provides durable results for at least two weeks with proper application.
- **Non-Flowing Formula:** Its solid texture prevents dripping and mess, allowing for adjustable placement.

## 2. SAFETY INFORMATION

The gel nail glue is formulated with gentle ingredients, free from unpleasant odors, and is designed to be harmless to your skin and natural nails when used as directed. Always perform a patch test if you have known sensitivities.

## 3. PRODUCT OVERVIEW

Image 3.1: Makartt Solid Nail Glue Gel product packaging, showing the gel in a jar, a scoop tool, and small examples of its use.

The Makartt Solid Nail Glue Gel is supplied in a 15ML jar. The package typically includes one jar of solid glue gel, a packaging box, and an instruction manual.

## 4. PREPARATION

Proper nail preparation is crucial for optimal adhesion and longevity of your nail application.

1. Remove any existing nail polish or cuticle oil.
2. File and shape your natural nails.
3. Gently push back or trim cuticles.
4. Lightly buff the surface of your natural nails to create a rough texture for better grip.
5. Cleanse nails thoroughly to remove dust and oils.
6. Apply a thin layer of base coat to your natural nails and cure under a UV/LED lamp for 60 seconds.
7. For nail tips, lightly file the inside surface of the nail tip where it will adhere to your natural nail.

# WARM TIPS

1. Solid glue gel has a **thick, solid** texture. This is its normal state—it's **not dried out** and can be used as intended.

2. It may feel harder in cold temperatures. If too firm, **soak it in warm water** briefly to soften (Note: won't melt, just eases application).

3. Buff the nails, **apply base coat to both tips and natural nails**, then cure for best results.

4. Choose **well-fitting nail tips** and **avoid air bubbles** for longevity.

## 5. APPLICATION INSTRUCTIONS

### 5.1 General Application for Nail Tips

Follow these steps for applying nail tips using Makartt Solid Nail Glue Gel:

1. After nail preparation (Section 4), select well-fitting nail tips that match your natural nail size.
2. Using a steel pusher or a nail tip, scoop a small amount of solid glue gel.
3. Apply the gel to the contact area of the nail tip, ensuring an even layer.

4. Align the nail tip with your natural nail, starting from the cuticle area.
5. Press down firmly, adjusting the position as needed to avoid air bubbles. The solid gel allows for repositioning before curing.
6. Wipe away any excess gel that may squeeze out around the edges.
7. Cure the nail under a UV/LED lamp for 60-120 seconds (refer to Curing Guidelines below).

## OPERATION STEPS

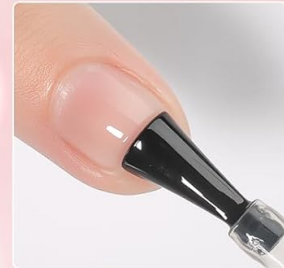

1. Remove the cuticle oil

2. File nails

3. Clean nails

4. Apply base coat and cure for 60s

5. Use steel pusher to apply solid glue to tips

Or

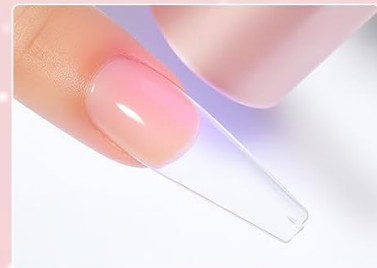

5. Pick up glue directly with nail tip

6. Press, adjust the nail glue and fix it (avoid bubbles)

7. Wipe off excess gel

8. Cure for 60-120s

### 5.2 Multi-functional Uses

Beyond attaching nail tips, this solid glue gel can be used for:

- **Sticking Rhinestones:** Apply a small amount of gel to the desired area, place the rhinestone, and cure.
- **3D Nail Decor Sculpting:** Use the gel to sculpt intricate 3D designs directly on the nail surface, then cure.
- **Rub Chrome Nail Powder:** The cured gel can provide a smooth surface for chrome powder application.

## 5.3 Curing Guidelines

The Makartt Solid Nail Glue Gel requires curing under a UV or LED nail lamp. The curing time may vary based on the lamp's wattage and the thickness of the gel layer.

- Cure for at least 60 seconds under a UV/LED lamp. For thicker applications or lower wattage lamps, extend curing time to 120 seconds or more.
- When using clear or sheer colored nail tips, UV light can pass through effectively, ensuring proper curing.
- Avoid using opaque or solid colored nail tips for application, as they can block UV light, preventing the glue from curing properly.
- With handheld nail lamps, cure the center of the nail first, then the sides, to ensure the entire area is fully cured.

## 6. MAINTENANCE AND LONGEVITY

With correct application and care, the Makartt Solid Nail Glue Gel can provide firm and long-lasting results for up to 4 weeks.

# FIRM & LONG LASTING UP TO 4 WEEKS

With the correct operation steps can make it more lasting

Image 6.1: Expected longevity of nail tips with Makartt Solid Nail Glue Gel.

The solid glue gel has a thick, solid texture, which is its normal state. It is not dried out. If the gel becomes too firm due to cold temperatures, you can briefly soak the jar in warm water (approximately 35°F+) to soften it for easier application. This process will not alter its solid state.

Image 6.2: Tips for maintaining gel consistency.

## 7. TROUBLESHOOTING

- **Gel is too firm:** If the solid glue gel is too hard to use, especially in cold temperatures, soak the jar in warm water (around 35°F or warmer) for a few minutes to soften it. This will ease application without changing its solid state.

- **Nail tips not adhering or lifting:** Ensure thorough nail preparation, including buffing and cleansing. Apply a base coat to both your natural nail and the inside of the nail tip. Press firmly during application to eliminate air bubbles and gaps. Ensure adequate curing time under a UV/LED lamp, especially for low-power lamps (120 seconds or more).
- **Gel not curing:** Verify that you are using clear or sheer colored nail tips, as opaque tips can block UV light. Ensure your UV/LED lamp is functioning correctly and provides sufficient wattage. Increase curing time if necessary.
- **Removal:** To remove the cured gel, it is recommended to use a nail drill to buff down the gel or a specialized gel nail glue remover.
