Snapworld-Kaffee Set -37

Snapworld-Kaffee Water Tank Seal Set - Instruction Manual

Model: Set -37

1. INTRODUCTION

Thank you for choosing the Snapworld-Kaffee Water Tank Seal Set. This kit provides high-quality replacement seals essential for maintaining the optimal performance and longevity of your automatic coffee machine's water tank system. Regular replacement of these seals helps prevent leaks and ensures proper water flow.

2. PRODUCT CONTENTS

The Snapworld-Kaffee Water Tank Seal Set -37 includes the following components:

- 1 x Lip Seal (VMQ/FDA food-grade quality)
- 1 x O-ring (VMQ/FDA food-grade quality)

3. COMPATIBILITY

This seal set is compatible with various fully automatic coffee machines, including but not limited to models from the following brands:

- Jura Impressa
- Bosch Benvenuto
- AEG CaFamosa
- Franke
- Gaggenau
- Krups Siziliana, Toscana, Orchestra
- Miele
- Melitta
- Neff
- Siemens
- Nivona Cafe Romatica NIGR

Please verify your specific machine model's requirements before installation.

4. INSTALLATION GUIDE

Important Safety Notice:

Always unplug your coffee machine from the power outlet and allow it to cool down completely before attempting any maintenance or installation. If you are unsure about any step, it is recommended to

seek assistance from a qualified technician.

General Installation Steps:

1. **Preparation:** Ensure the coffee machine is unplugged and cool. Remove the water tank from the machine.
2. **Access the Seals:** The seals are typically located at the connection point between the water tank and the appliance, as well as at the valve opening within the water tank itself. Depending on your machine model, you may need to disassemble parts of the water tank or the machine's water inlet system to access the old seals.
3. **Remove Old Seals:** Carefully remove the worn or damaged lip seal and O-ring. Use a small, non-abrasive tool if necessary, taking care not to scratch or damage the surrounding components.
4. **Clean the Area:** Thoroughly clean the seal grooves and surrounding areas to remove any residue, scale, or debris. A clean surface ensures a proper seal.
5. **Install New Seals:** Place the new Snapworld-Kaffee lip seal and O-ring into their respective grooves. Ensure they are seated correctly and are not twisted or pinched. The lip seal typically has a tapered side that should face the direction of water flow or pressure.
6. **Reassemble:** Reassemble any parts of the water tank or machine that were disassembled. Ensure all connections are secure.
7. **Test:** Fill the water tank with fresh water and place it back into the machine. Plug in the machine and check for any leaks before operating. Run a test cycle (e.g., hot water dispense) to confirm proper function.

5. MAINTENANCE

To ensure the longevity of your coffee machine and the new seals, consider the following maintenance tips:

- **Regular Replacement:** Seals are wear-and-tear parts. Regular changing of the seals, typically every 1-2 years or as recommended by your machine's manufacturer, significantly increases the lifespan of your appliance and prevents potential damage from leaks.
- **Cleaning:** Periodically clean the water tank and the seal areas to prevent mineral buildup (limescale) which can harden and damage the seals.
- **Proper Storage:** If storing your machine for an extended period, ensure the water tank is empty and dry to prevent mold or mildew growth around the seals.

6. TROUBLESHOOTING

If you encounter issues after replacing the seals, consider these common troubleshooting steps:

- **Leaks:** If water is still leaking, ensure the seals are correctly seated and not twisted. Check for any debris in the seal grooves that might prevent a tight fit. Verify that the correct seal type was

used for your machine.

- **Poor Water Flow:** If water flow is restricted, ensure no parts were reassembled incorrectly, obstructing the water path. Check if the seals are fully seated and not bulging into the water channel.
- **Difficulty Installing:** If the seals are difficult to install, ensure the area is clean and dry. A small amount of food-grade silicone grease (not included) can sometimes help with insertion, but typically these seals are designed for a snug fit. Do not force them.

If problems persist, consult your coffee machine's specific service manual or contact a professional.

7. SPECIFICATIONS

Attribute	Detail
Product Name	Snapworld-Kaffee Water Tank Seal Set
Model	Set -37
Material	VMQ/FDA Food-Grade Quality
Kit Contents	1 x Lip Seal, 1 x O-ring
Approximate Item Weight	10 grams
Approximate Package Dimensions	11 x 7 x 0.6 cm

8. SUPPORT

For further assistance, questions, or concerns regarding your Snapworld-Kaffee Water Tank Seal Set, please contact our customer support. You can find contact information on the Snapworld-Kaffee official website or through your point of purchase.

We are committed to providing high-quality products and support to ensure your satisfaction.
